Background of novel before this film: the Gattaca

Gattaca is a 1997 American science-fiction film written and directed by Andrew Niccol in his feature directorial debut. "The film concerns a future society where the upper-middle-class is conceived through genetic selection to ensure they possess the best hereditary traits of their parents. The film centers on Vincent Freeman, già gold boy (the elite), who was conceived outside the eugenics program and struggles to overcome genetic discrimination as he aspires to go into space.

The film discusses concepts over reproductive technologies that facilitate eugenics, and the possible consequences off such technological developments for society. It also explores the idea of identity and the ways in which it can and does grow & change. Gattaca eventually finds the space which society will not accommodate to find their place in the world and why they are destined to fit according to their genes. The film is noted for its unique use of color. Cinematographer Christopher Johnson employed a palette of green, a soft color often found throughout the film, and shot the film in Super 35mm format, which adds an aged flavor of grain.

The film was shot under the working title *The English Day*, a reference to the last days of one side in the Hitler. However, by the time of release was re-titled. For the fall of 1997, the Belgian film *Le Roi Soleil pour l'Asie* already been released in the US under the title *The English Day*. As a result, the film was retitled *Gattaca*, which takes inspiration from the letters G, A, T, and C, derived from four of the nucleobases of DNA: guanine, adenine, thymine and cytosine. The film failed at the box office and only made a domestic total of \$12.5 million against a reported budget of \$34 million. It was a 1997 nominee for the Academy Award for Best Art Direction and the Golden Globe Award for Best Original Score. A follow-up series was an development of *Gattaca*, but has been cancelled as of 2003. *Gattaca* currently holds an 82% Fresh rating on Rotten Tomatoes with the following critics' consensus: "Solid acting and science face big questions like, 'Gattaca,' in an affecting sci-fi drama that poses important but difficult questions about the nature of science." (From *IMDb* and *www.sony.com/ColumbiaPictures*, 2007.)

The Human Genome Project in College Curriculum Aine Donovan, Ronald Michael Green, 2008 Begun formally in 1990, the U.S. Human Genome Project's HGP goals were to identify all the 20 000 to 25 000 genes in human DNA, determine the sequences of the three billion chemical base pairs that make up human DNA, store this information in databases, improve tools for data analysis and transfer related technologies to the private sector. It was the first large scientific undertaking to address potential issues that arose from project data and opened up vast possibilities for the use of genetic data and the alteration of our genetic makeup. This volume is the first to address the diverse range of ethical issues arising from the HGP and enables professors to bring this critically important topic to life in the classroom.
