

## + ***INTRODUCTION TO AGRICULTURE***

**Agriculture** ; is the science that deals with growing of crops and rearing of livestock

### **IMPORTANCE OF AGRICULTURE**

#### **Economic importance**

- source of food
- source of draught power
- source of raw materials
- source of manure

#### **Social importance**

- they are used as food in ceremonies, e.g weddings
- they are used to pay bride
- for prestige( People with many cattle are respected by the community)
- Animals can be slaughtered during ritual ceremonies.

### **IMPACT OF HIV and AIDS ON AGRICULTURAL PRODUCTIVITY**

- Farmers and farm workers have become sick and unable to work effectively .some cannot work at all leading to no or low productivity
- Farmers and farm workers often have to take care of relatives who are ill and they cannot spend many hours working, leading to low productivity
- When farmers and or farmers' workers die there are fewer skilled people to work on farms.
- Farmers often have to spend a lot of money on medicines for themselves and their relatives and they then have less money to spend on fertilizers and implements.
- The government has to spend money on helping those who are sick .This means that there is less money to spend on training people

### **IMPACT OF AGRICULTURAL ACTIVITIES IN ON THE ENVIRONMENT**

- It may lead to overgrazing
- Lead to soil erosion
- Fertilizers and pesticides can lead to pollution of air and water
- Wild animals are forced from their habitat for agricultural activities
- May lead to depletion of some plant nutrients from the soil
- Diseases from domesticated animals may often kill wild animals.
- They may lead to drying up of water resources if too many animals are kept

### **RELATIONSHIP BETWEEN AGRICULTURE AND OTHER SUBJECTS**

**Biology**; is the study of living plants (botany) and animals (zoology), which is also done agriculture

**Geography**; is all about learning about the soil, weather and climatic conditions of an area, which is also important in agriculture

**Chemistry**; farmers apply this knowledge when dealing with pesticides, fertilizers

**Mathematics**; it deals with calculations and measurements which are also useful in Agriculture

**Physics**; farmers use the knowledge on how to take care of farm machinery and repairing

### **Agile Data-Oriented Research Tools to Support Smallholder Farm System Transformation** James

Hammond, Mark Van Wijk, Aniruddha Ghosh, Tim Pagella, Jacob Van Etten, 2023-05-09 Smallholder farming systems contribute a substantial quantity of the food consumed in many lower and middle income countries and contribute to the national and local economies. Despite the importance of smallholder farming a transformation is needed in order to deliver food security and decent incomes for the farmers themselves and at the national level. This transformation must also be sustainable in terms of environmental impacts and social equity in order to be successful in the long term. The pressures of population growth, climate change and land fragmentation compound the problem. Addressing these overlapping issues is a big challenge. One obstacle is the lack of good quality granular data linking these issues together. Household surveys are the workhorse method for gathering such data but there are well known problems that prevent household survey data from building up a big picture and delivering insights beyond the geographical boundary of each individual study. Such obstacles include the lack of access to datasets, differences in survey design and respondent biases. Agile data oriented research tools can help to overcome these challenges. We use the term agile to imply methods that do not attempt exhaustive measurements which are designed to be easy to use and which entail some degree of flexibility in terms of adaptation to local conditions and integration with other tools or methods. Often these methods also nudge the behavior of tool users towards best practices. In recent years various research tools and approaches have been published which fit within our definition of agile data oriented research tools. The domains these tools function in include monitoring and evaluation, intervention targeting, tailored information delivery, citizen science, credit scoring and user feedback collection, all with the overarching aim to improve data quality and access for those studying the sustainable development of smallholder farming systems. The goal of this Research Topic is to better define that niche, the ecosystem of tools and current practices and to explore how such approaches can provide the underpinning knowledge required for the transformation of smallholder farming systems. One example of an agile data oriented research tool is the Rural Household Multi Indicator Survey (RHoMIS). It is a modular digital system for building household surveys addressing the common topics in smallholder development. It was purposefully designed to give a broad overview of the farm system whilst keeping survey duration to a minimum to be user friendly in implementation and to be sufficiently flexible to function in a broad variety of locations and projects. Since 2015 it has been used by 30 organizations in 32 countries to interview over 34 000 households. The tool and database are open access and a community of practice is developing around the tool. We particularly welcome contributions that engage with the RHoMIS tool and data. However we also describe the tool in order to provide an example of what is meant by an agile data oriented research tool and welcome contributions focusing on other tools or methodologies. We encourage the submission of manuscripts addressing the above topic and those which fit within one of the following three sub themes: i) Perspectives or review articles which explore the

niche best practices or promising approaches in agile data oriented research tools for smallholder farm system transformation Also technology and code articles that describe new tools are welcomed ii Original research articles presenting analyses based on data derived from agile data oriented tools used at the project level Examples include impact evaluations adoption studies targeting studies or adaptive management and should reflect on the additional benefit leveraged by the agile method applied iii Original research articles that make use of the large amounts of data generated by such agile methods and or link between agile data and other data sources Examples include meta analyses of data from multiple studies layering data collected from different agile tools or linking agile data to remote sensing or large scale modeling outputs
