Problems Corrected

- Corrects an intermittent problem that prevents the Doppler spectral trace from updating when the sample volume cursor is moved.
- Improves system response to the Freeze control. Also improves system response times due to TGC slidepot or other control activation during periods of high PCM activity.
- Corrects an issue with the OB graph causing current measurement values to not be displayed in the year 2000.
- Adds a low-level optical disk format option to the user diagnostics menu. Performing a low-level optical disk format enables faster disk operation.
- Allows the user to perform a CW exam using the D2CW probe when the BPT9-5 scanhead is connected. Previously, there was no Doppler signal when this was attempted.
- Prevents the system from hanging after deleting all images from the hard disk if one of the images is not readable. Unreadable images may result from turning off the system before the image has been fully saved to disk, a hard disk error, or a power supply problem.
- Corrects a DiskLink issue with the patient exam directory showing patient exams as being sent to the optical disk when they are not.
