Glycoprotein Analysis Weston B Struwe, 2024-10-16 Glycoproteins are central to numerous cellular processes and are among the most structurally complex
 biomolecules in nature This unique complexity stems from variability in complex oligosaccharides that are located
 throughout the protein a feature that is profoundly important for regulating biomolecular interactions but also makes
 glycoproteins difficult to study As such glycoprotein analysis entails a range of techniques to bridge the knowledge gap
 between glycoprotein structure and biological function This book serves as an authoritative guide to glycoprotein analysis
 written by internationally recognised experts in the field and discussed in the context of real world applications across the
 life sciences It provides a wide ranging assessment of the modern methods from those used to characterise glycoprotein
 structure to approaches proficient in uncovering the molecular mechanisms by which they function as well as those capable
 of measuring structural dynamics and macromolecular assembly These methods differ to a large extent and include mass
 spectrometry glycan lectin arrays nuclear magnetic resonance infrared spectroscopy scanning probe microscopy and high
 performance liquid chromatography Equally important are computational techniques including molecular dynamics and
 bioinformatics which are also covered and discussed in the wider context of glycoprotein analysis Glycobiology is indeed a
 rapidly growing field and the development of advanced tools for glycoproteins analysis has been enabled by researchers from
 different backgrounds working to overcome long standing analytical challenges and biological questions involving
 glycosylation This book is intended to aid academic and professional researchers at various levels of their career to gain a
 deeper appreciation of cutting edge methods in glycoprotein analysis and their applications in biomolecular research
 biotherapeutic development structural biology and biophysical chemistry
