**Robot Physical Interaction through the combination of Vision, Tactile and Force Feedback** Mario Prats, Ángel P. del Pobil, Pedro J. Sanz, 2012-10-05 Robot manipulation is a great challenge it encompasses versatility adaptation to different situations autonomy independent robot operation and dependability for success under modeling or sensing errors A complete manipulation task involves first a suitable grasp or contact configuration and the subsequent motion required by the task This monograph presents a unified framework by introducing task related aspects into the knowledge based grasp concept leading to task oriented grasps Similarly grasp related issues are also considered during the execution of a task leading to grasp oriented tasks which is called framework for physical interaction FPI The book presents the theoretical framework for the versatile specification of physical interaction tasks as well as the problem of autonomous planning of these tasks A further focus is on sensor based dependable execution

combining three different types of sensors force vision and tactile The FPI approach allows to perform a wide range of robot manipulation tasks All contributions are validated with several experiments using different real robots placed on household environments for instance a high DoF humanoid robot can successfully operate unmodeled mechanisms with widely varying structure in a general way with natural motions This research was recipient of the European Georges Giralt Award and the Robotdalen Scientific Award Honorary Mention

**Modular Branching Rules for Projective Representations of Symmetric Groups and Lowering Operators for the Supergroup  $Q(n)$**  Aleksandr Sergeevich Kleshchëv, Vladimir Shchigolev, 2012 There are two approaches to projective representation theory of symmetric and alternating groups which are powerful enough to work for modular representations One is based on Sergeev duality which connects projective representation theory of the symmetric

group and representation theory of the algebraic supergroup  $Q_n$  via appropriate Schur super algebras and Schur functors The second approach follows the work of Grojnowski for classical affine and cyclotomic Hecke algebras and connects projective representation theory of symmetric groups in characteristic  $p$  to the crystal graph of the basic module of the twisted affine Kac Moody algebra of type  $A_{p-1}^{(2)}$  The goal of this work is to connect the two approaches mentioned above and to obtain new branching results for projective representations of symmetric groups

*An Introduction to Comets*  
Nicolas Thomas, 2020-12-15 Written by a leading expert on comets this textbook is divided into seven main elements with a view to allowing advanced students to appreciate the interconnections between the different elements The author opens with a brief introductory segment on the motivation for studying comets and the overall scope of the book The first chapter describes fundamental aspects most usually addressed by ground based observation The author then looks at the basic physical phenomena in four separate chapters addressing the nucleus the emitted gas the emitted dust and the solar wind interaction Each chapter introduces the basic physics and chemistry but then new specific measurements by Rosetta instruments at comet Churyumov Gerasimenko are brought in A concerted effort has been made to distinguish between established fact and conjecture Deviations and inconsistencies are brought out and their significance explained Links to previous observations of comets Tempel 1 Wild 2 Hartley 2 Halley and others are made The author then closes with three smaller chapters on related objects the loss of comets and prospects for future exploration This textbook includes over 275 graphics and figures most of which are original Thorough explanations and derivations are included throughout the chapters The text is therefore designed to support MSc students and new PhD students in the field wanting to gain a solid overview of the state of the art

**Statistical Inference Via Convex**

**Optimization** Anatoli Juditsky, Arkadi Nemirovski, 2020-04-07 This authoritative book draws on the latest research to explore the interplay of high dimensional statistics with optimization Through an accessible analysis of fundamental problems of hypothesis testing and signal recovery Anatoli Juditsky and Arkadi Nemirovski show how convex optimization theory can be used to devise and analyze near optimal statistical inferences Statistical Inference via Convex Optimization is an essential resource for optimization specialists who are new to statistics and its applications and for data scientists who want to improve their optimization methods Juditsky and Nemirovski provide the first systematic treatment of the statistical techniques that have arisen from advances in the theory of optimization They focus on four well known statistical problems sparse recovery hypothesis testing and recovery from indirect observations of both signals and functions of signals demonstrating how they can be solved more efficiently as convex optimization problems The emphasis throughout is on achieving the best possible statistical performance The construction of inference routines and the quantification of their statistical performance are given by efficient computation rather than by analytical derivation typical of more conventional statistical approaches In addition to being computation friendly the methods described in this book enable practitioners to

handle numerous situations too difficult for closed analytical form analysis such as composite hypothesis testing and signal recovery in inverse problems Statistical Inference via Convex Optimization features exercises with solutions along with extensive appendixes making it ideal for use as a graduate text
