The Truth Machine reveals the empowerment possible when self interested middlemen give way to the transparency of the blockchain while highlighting the job losses assertion of special interests and threat to social cohesion that will accompany this shift With the same balanced perspective they brought to The Age of Cryptocurrency Casey and Vigna show why we all must care about the path that blockchain technology takes moving humanity forward not backward **The FINTECH Book** Susanne Chishti, Janos Barberis, 2016-05-02 A front line industry insider's look at the financial technology explosion The FINTECH Book is your primary guide to the financial technology revolution and the disruption innovation and opportunity therein Written by prominent thought leaders in the global fintech investment space this book aggregates diverse industry expertise into a single informative volume to provide entrepreneurs bankers and investors with the answers they need to capitalize on this lucrative market Key industry developments are explained in detail and critical insights from cutting edge practitioners offer first hand information and lessons learned The financial technology sector is booming and entrepreneurs bankers consultants investors and asset managers are scrambling for more information Who are the key players What's driving the explosive growth What are the risks This book collates insights knowledge and guidance from industry experts to provide the answers to these questions and more Get up to speed on the latest industry developments Grasp the market dynamics of the fintech revolution Realize the sector's potential and impact on related industries Gain expert insight on investment and entrepreneurial opportunities The fintech market captured over US 14 billion in 2014 a three fold increase from the previous year New startups are popping up at an increasing pace and large banks and insurance companies are being pushed toward increasing digital operations in order to survive The financial technology sector is booming and The FINTECH Book is the first crowd sourced book on the subject globally making it an invaluable source of information for anybody working in or interested in this space **Driverless Cars: On a Road to Nowhere?** Christian Wolmar, 2020-09-24 Wolmar's entertaining polemic sets out the many technical legal and moral problems that obstruct the path to a driverless future and debunks many of the myths around that future's purported benefits **Are Trams Socialist?** Christian Wolmar, 2016-05-20 Transport is key to our daily lives The transport system is essential to ensure the movement of people and goods and most of us will use the roads or public transport every day Vast sums are tied up in it and are spent on trying to resolve the problems of congestion and delays And yet it is a most neglected field of politics Britain has never had a coherent transport policy Transport ministers are regarded as minnows compared with their big beast colleagues in other ministries Successive governments have barely attempted to get to grips with the challenge of getting people around efficiently and safely while limiting the environmental damage caused by transport In this entertaining polemic Christian Wolmar an author and journalist who has written about transport for over two decades explains why politicians have not addressed the crucial issue of balancing transport needs with environmental considerations Instead they have been seduced by the popularity of the car and pressure from the car lobby and they have been sidetracked by dogma Solutions are at hand

and successful examples can be seen elsewhere in Europe but courage and clear thinking are needed if they are to be implemented

Bad Habits, Hard Choices David Fell, 2016-03-02 Consumers in Britain face a curious mix of taxes and duties that are messy opaque and out of date They are also unfair the poorer you are the more of your income goes on paying these taxes At the same time we are ceaselessly bombarded by marketing information that is very one sided The foods that make us fat for example are promoted a great deal more than the foods that could keep us healthy and again it is mainly the poor who bear the brunt This book draws on insights from behavioural economics participative decision making and the author's twenty five year research career to take a fresh look at these issues It concludes that there is a fair inclusive adaptable affordable and resilient way of enabling us to eat healthily and to tackle the obesity crisis The author proposes that negative VAT should be charged on healthy foods and high VAT should be charged on unhealthy foods The book sets out a four step process to actually implement this new regime each step of which depends on mechanisms that have already been used by government It is a bold yet practical proposition for tackling one of the most costly and damaging challenges we face

Britain's Cities, Britain's Future Mike Emmerich, 2017-02-20 Britain invented the modern industrial city in the nineteenth century But by the late 20th century most British cities had become basket cases Today London overshadows the rest of the country as the UK's only world city No other large country is anything like as economically and politically centralized This concentration of power damages Britain's economy and fuels the sense of discontent felt by the millions of people for whom the capital seems like another planet Yet it is cities that are fuelling economic growth around the world Mike Emmerich looks at the DNA of cities and how it expresses itself in their institutions governance public services religion and culture He argues that the UK needs a devolutionary ratchet allowing major cities the freedom to seek devolution of any area of public spending that is not inherently national in nature such as defence Cities should have powers to raise some of their own taxes including business

property and sales based taxes and to increase them He calls for sustained investment in transport and infrastructure and also training An innovation centric industrial policy would also have an emphasis on the social fabric of cities and crucially their institutions

Blockchain Revolution Don Tapscott, Alex Tapscott, 2016-05-10 Blockchain technology is powering our future As the technology behind cryptocurrencies like bitcoin and Facebook's Libra open software platforms like Ethereum and disruptive companies like Ripple it's too important to ignore In this revelatory book Don Tapscott the bestselling author of Wikinomics and his son blockchain expert Alex Tapscott bring us a brilliantly researched highly readable and essential book about the technology driving the future of the economy Blockchain is the ingeniously simple revolutionary protocol that allows transactions to be simultaneously anonymous and secure by maintaining a tamperproof public ledger of value Though it's best known as the technology that drives bitcoin and other digital currencies it also has the potential to go far beyond currency to record virtually everything of value to humankind from birth and death certificates to insurance claims land titles and even votes Blockchain is also essential to understand if you're an artist who wants to make a living off your art a consumer who wants to know where that hamburger meat really came from an immigrant who's tired of paying big fees to send money home to your loved ones or an entrepreneur looking for a new platform to build a business And those examples are barely the tip of the iceberg As with major paradigm shifts that preceded it blockchain technology will create winners and losers This book shines a light on where it can lead us in the next decade and beyond

Travel Fast or Smart? David Metz, 2016-09-01 Britain does not have a coherent transport policy and conventional transport economics has reached a dead end A transport policy should incorporate systematic thinking about the travel needs of society but in Britain public investment in the transport system has been extraordinarily volatile We closed underused railways and then experienced a doubling of passenger numbers prompting huge new investment We gave up making substantial investments in motorways but we have now chosen to revive the road construction effort in a big way We vacillate on road pricing introducing congestion charging successfully in London but backing off elsewhere because of local opposition We have delayed the decision about whether and where to build additional airport capacity for decades This mess has come about because policy has focused on big construction projects

and time savings when it should have been focusing on the part that people and places play in economic development This book sets out the principles that could underpin a strategic policy for transport Instead of focusing piecemeal on getting from place to place ever faster we need to think about how and where we want the economy to develop and about how new digital technologies can help us achieve what is needed

Evolving Work Ronnie Lessem, Tony Bradley, 2018-08-06 The idea of Self and the authenticity of particular identities have been rapidly dissolving in the acids of post modern globalising capitalism The hegemony of patterns of work wage labor and the operation of labour markets in the American West and European North has ridden rough shod over distinctive ways of enabling communities to flourish in many parts of the Southern and Eastern worlds Global South But this is not inevitable Indeed as this book indicates there are many practical examples across the globe that connect with some of the most significant theoretical challenges to the operation of dehumanising work which reveal that a profound reversal is taking place As such the core theme of this book is to show that a movement is occurring whereby self employment can be transformed into communal work that employs the Self in ways that release the authentic vocations of people individually and collectively The approach taken in these chapters traverses the globe utilising the original integral worlds model that will be familiar to students of the Trans4M Routledge Transformation and Innovation series developed over more than a decade Such a standpoint points the way to the release of particular social and economic cultures in each of what we term the four realities or worldviews of South East North and Western worlds In this book we use the methodology of GENEalogy identifying the realms associated with each world to show how the rhythms that is Grounding Emergence Navigation and Effect of each is leading to greater economic social and spiritual freedom for individuals organisations communities and indeed entire societies
