**Using the Engineering Literature** Bonnie A. Osif,2006-08-23 The field of engineering is becoming increasingly interdisciplinary and there is an ever growing need for engineers to investigate engineering and scientific resources outside their own area of expertise However studies have shown that quality information finding skills often tend to be lacking in the engineering profession Using the Engineerin

**Numerical Modelling of Hydrodynamics for Water Resources** Pilar Garcia Navarro,Enrique Playán,2007-11-01 Overland flow modelling has been an active field of research for some years but developments in numerical methods and computational resources have recently accelerated progress producing models for different geometries and types of flows such as simulations of canal and river networks Flow in canals has traditionally been described using one dimensional depth averaged shallow water models but a variety of simulation techniques now facilitate the management of hydrodynamic systems providing models which incorporate complex geometry and diverse flows Much effort has gone into elaborating canal operational rules based on decision support systems with the dual aim of assuring water delivery and meeting flow control constraints In natural water courses water management problems are associated with the need to meet quality standards Numerical modelling of advection diffusion can be used to manage problems related to the movement of solutes in rivers and aquifers The analysis of solute transport is used to safeguard the quality of surface and ground water and to help prevent eutrophication Solute flow through the soil can be dynamically linked to overland flow for hydrological and agricultural applications Advances in modelling also cast new light on sediment transport in rivers exploring the complex dynamics of river bed erosion and deposition and assist in the analysis of river reservoir systems All these issues are discussed in Numerical Modelling of Hydrodynamics for Water Resources which will be useful to civil engineers applied mathematicians hydrologists and physicists
