The 21st Century Industrial Robot: When Tools Become Collaborators Maria Isabel Aldinhas Ferreira, Sarah R. Fletcher, 2021-10-25 This book aims to discuss the technical and ethical challenges posed by the present technological framework and to highlight the fundamental role played by human centred design and human factors in the definition of robotic architectures for human robot collaboration The book gives an updated overview of the most recent robotic

technology conceived and designed to collaborate with human beings in industrial working scenarios The technological development of robotics over the last years and the fast evolution of AI machine learning and IoT have paved the way for applications that extend far beyond the typical use of robots performing repetitive tasks in exclusive spaces In this new technological paradigm that is expected to drive the robotics market in the coming years robots and workers will coexist in the same workplace sharing not only this lived space but also the roles and functions inherent to a process of production merging the benefits of automated and manual performing However having robots cooperating in real time with workers responding in a physical psychological and social adequate way requires a human centred design that not only calls for high safety standards regulating the quality of human robot interaction but also demands the robot s fine grained perception and awareness of the dynamics of its surrounding environment namely the behaviours of their human peers their expected actions responses fostering the necessary collaborative efforts towards the accomplishment of the tasks to be executed
