Getting Started with Tiva ARM Cortex M4 Microcontrollers Dhananjay V. Gadre, Sarthak Gupta, 2017-10-16 The book presents laboratory experiments concerning ARM microcontrollers and discusses the architecture of the Tiva Cortex M4 ARM microcontrollers from Texas Instruments describing various ways of programming them Given the meager peripherals and sensors available on the kit the authors describe the design of Padma a circuit board with a large set of peripherals and sensors that connects to the Tiva Launchpad and exploits the Tiva microcontroller family s on chip features ARM microcontrollers which are classified as 32 bit devices are currently the most popular of all microcontrollers They cover a wide range of applications that extend from traditional 8 bit devices to 32 bit devices Of the various ARM subfamilies Cortex

M4 is a middle level microcontroller that lends itself well to data acquisition and control as well as digital signal manipulation applications. Given the prominence of ARM microcontrollers it is important that they should be incorporated in academic curriculums. However there is a lack of up to date teaching material, textbooks and comprehensive laboratory manuals. In this book each of the microcontroller's resources, digital input and output, timers and counters, serial communication channels, analog to digital conversion, interrupt structure and power management features are addressed in a set of more than 70 experiments to help teach a full semester course on these microcontrollers. Beyond these physical interfacing exercises it describes an inexpensive BoB break out board that allows students to learn how to design and build standalone projects as well as a number of illustrative projects.

Future Generation Information Technology Jung-Hyun Lee, Byeong-Ho Kang, Dominik Ślęzak, 2010-11-26. As information technology IT becomes specialized and fragmented it is easy to lose sight that many topics have common threads and because of this advances in one's discipline may transmit to another. The presentation of results between different disciplines encourages this interchange for the advancement of IT as a whole. This volume comprises the selection of papers presented at the Second International Mega Conference on Future Generation Information Technology FGIT 2010 composed of the following 11 international conferences: Advanced Software Engineering and Its Applications ASEA 2010, Bio Science and Bio Technology BSBT 2010, Control and Automation CA 2010, Disaster Recovery and Business Continuity DRBC 2010, Database Theory and Application DTA 2010, Future Generation Communication and Networking FGCN 2010, Grid and Distributed Computing GDC 2010, Multimedia Computer Graphics and Broadcasting MulGraB 2010, Security Technology SecTech 2010, Signal Processing Image Processing and Pattern Recognition SIP 2010 as well as u and e Service Science and Technology UNESST 2010. In total 1 630 papers were submitted to FGIT 2010 from 30 countries. The submitted papers went through a rigorous reviewing process and 395 papers were accepted. Of these 395 papers 60 were assigned to this volume. In addition this volume contains 7 invited papers and abstracts. Of the remaining accepted papers 269 were distributed among 8 volumes of proceedings published by Springer in the CCIS series. 66 papers were withdrawn due to technical reasons.
