Segmentation of Hand Bone for Bone Age Assessment Yan Chai Hum,2013-05-25 The objective of this Brief

is to provide a solution to the unsolved technical problem in segmentation for the automated bone age assessment system. The task is accomplished by first applying the modified histogram equalized module then applying the proposed automated anisotropic diffusion technique. It is followed by a novel fuzzy quadruple division scheme to optimize the central segmentation algorithm and then an additional quality assurance scheme. The designed segmentation framework works without demanding scarce resources such as training sets and skillful operators. The results have shown that the designed framework is capable of separating the soft tissue and background from the hand bone with high accuracy. This Brief should be especially useful for students and professional researchers in the Biomedical and image processing fields. **Microeconomic Theory** Walter

Nicholson, 1998. Stressing both intuition and analytical precision, this text uses a calculus-based approach to present coverage of all key microeconomic topics. The integration of modern theories of information throughout the text includes a chapter on information and competitive equilibrium. *Microeconomic Theory* Walter Nicholson, Christopher Snyder, 2024-11-04
