*Addressing Inequality in South Asia* The World Bank,2014-10-08 Inequality in South Asia appears to be moderate when looking at standard indicators such as the Gini index which are based on consumption expenditures per capita But other pieces of evidence reveal enormous gaps from extravagant wealth at one end to lack of access to the most basic services at the other Which prompts the question How bad is inequality in South Asia And why would that matter This book takes a comprehensive look at the extent nature and drivers of inequality in this very dynamic region of the world It discusses how some dimensions of inequality such as high returns to investments in human capital contribute to economic growth while others such as high payoffs to rent seeking or broken aspirations undermine it Drawing upon a variety of data sources it disentangles the contribution that opportunity in young age mobility in adult years and support throughout life make to inequality at any point in time Equally important the book sheds light on the prospects of escaping disadvantage over time The analysis shows that South Asia performs poorly in terms of opportunity Access to basic services is partial at best and can be traced to characteristics at birth including gender location and caste Conversely the region has had a robust performance in terms of geographical and occupational mobility despite its cluttered urbanization and widespread informality Migration and jobs have served disadvantaged groups better than the rest highlighting the importance of the urbanization and private sector development agendas Support falls somewhere in between Poverty alleviation programs are pervasive But the mobilization of

public resources is limited and much of it is wasted in regressive subsidies while inter government transfers do not do enough to mitigate spatial inequalities *Planning Support Methods* Richard E. Klosterman, Kerry Brooks, Joshua Drucker, Edward Feser, Henry Renski, 2018-06-25 *Planning Support Methods* offers the only practical guide to the key methods of urban and regional planning The authors apply and critically assess the most important methods for demographic and economic analysis and projection and land suitability analysis providing an essential resource for practicing planners and planning students alike For helpful tools from the author including Excel workbooks visit <https://planningsupport.org/tools> For resources including PowerPoint presentations and supplemental readings visit <https://planningsupport.org/resources>

**Air Transport and Regional Development Policies** Anne Graham, Nicole Adler, Hans-Martin Niemeier, Ofelia Betancor, António Pais Antunes, Volodymyr Bilotkach, Enrique J. Calderón, Gianmaria Martini, 2020-12-17

Air Transport and Regional Development Policies is one of three interconnected books related to a four year European Cooperation in Science and Technology COST Action established in 2015. The Action called Air Transport and Regional Development ATARD aimed to promote a better understanding of how the air transport related problems of core regions and remote regions should be addressed in order to enhance both economic competitiveness and social cohesion in Europe. This book focuses on policy implications related to air transport and regional development. It begins with chapters that generally discuss important policy issues related to air transport and regional development in relation to connectivity and accessibility, dependency, airport governance and regulation and air traffic control frameworks. This is followed by a number of chapters that consider government subsidies and state aid. The final chapters focus on other policy implications: tourism development, airport expansion, passenger taxation and noise control. Currently no other single source publication covers this topic area in such a comprehensive manner insofar as it considers so many policies and examples. The book aims at becoming a major reference source on the topic, drawing from experienced researchers in the field, covering the diverse experience and knowledge of the members of the COST Action. The book will appeal to academics, practitioners and government bodies who have a particular interest in acquiring detailed comparative knowledge and understanding of the policy implications of air transport and regional development. Along with the other two books, Air Transport and Regional Development Methodologies and Air Transport and Regional Development Case Studies, it fills a much needed gap in the literature.

**The Oxford Handbook of the Economics of Prostitution** Scott Cunningham, Manisha Shah, 2016-08-10

Prostitution bears the unique title of being both the world's oldest profession and one of the least understood occupations. Unlike most of the crime and family literature, prostitution appears to have all the features of traditional markets: prices, supply and demand considerations, variety in the organizational structure and policy relevance. Despite this, economists have largely ignored prostitution in their research and writings. This has been changing, however, over the last twenty years as greater access to data has enabled economists to build better theories and gain a better understanding of the organization of the sex market. The Oxford Handbook of the Economics of Prostitution fills the gap in our understanding. It brings together many of the top researchers in the field who explain how the prostitution markets are organized across space and time, the role of technology in shaping labor supply and demand, the intersection of prostitution with trafficking and the optimal use of law enforcement. What makes the material unique is its explicit focus on economics as the primary methodology for organizing our understanding of prostitution. The Handbook brings to scholars' attention for the first time a collection of original writings on prostitution that provides an overview of what is known and what is not known in this area. Researchers with an interest in underground markets, labor

economics risky behaviors marriage and gender will find the book's contents illuminating and path breaking *Migration and Development in India* Amrita Datta, 2022-09-30 This book deals with a wide range of issues related to rural urban migration in the context of neoliberal economic development in India. Focusing on three core areas first it traces state discourses on rural urban migration in India since the 1930s critically analysing its industrial labour rural and urban programmes and policies. Second through data on longitudinal surveys undertaken in rural Bihar in 1999 2011 and 2016 it examines changes in patterns of migration and sources of income estimates determinants and impacts of migration. Third based on fieldwork in the village and the city it presents an in depth account of a rural urban migration stream in contemporary India. It shows how contrary to the results of conventional data sources such as the Census and NSSO that mobility is high in rural Bihar and has significantly increased over time as a result of rising labour demand in distant urban markets elsewhere in India. Further it also provides evidence of decoupling of agriculture from the rural in India. Combining quantitative and qualitative methods in development research this book will be of great interest to scholars and researchers of development studies migration studies development economics sociology demography public policy and South Asian studies.
