SERVICE MANUAL

MS-10C-IIA

KATO WORKS CO.,LTD.

PREFACE

This Manual has been compiled as a handbook for servicing "Cruspeed", the new automatic digital control prevention device which is fitted to KATO cranes.

Unlike the conventional analog ACS device, the new digital ACS system with its built-in microprocessor has a self-diagnostic function for servicing in addition to its function as an overload prevention device. Consequently, while the conventional analog ACS device requires a service log for data collection, this can now be performed by the digital ACS system with its self-diagnostic function. Furthermore, it has become possible to automatically monitor the status of the overload prevention device itself during routine crane operations, resulting in improved reliability. However, even the most advanced electronic circuit provide adequate crane control performance unless the procedure is correctly followed by service engineers.

It is therefore recommended that this Manual be read thoroughly so that the appropriate service techniques can be mastered.

Kato, Aye M. Myint, Johann Steiner, 2017-05-03 Traditionally abnormalities of neurons and neuronal networks including synaptic abnormalities and disturbance of neurotransmitters have dominantly been believed to be the main causes of psychiatric disorders Recent cellular neuroscience has revealed various unknown roles of glial cells such as astrocytes oligodendrocytes and microglia These glial cells have proved to continuously contact with neurons synapses and have been shown to play important roles in brain development homeostasis and various brain functions Beyond the classic

neuronal doctrine accumulating evidence has suggested that abnormalities and disturbances of neuron glia crosstalk may induce psychiatric disorders while these mechanisms have not been well understood This Research Topic of the Frontiers in Cellular Neuroscience will focus on the most recent developments and ideas in the study of glial cells astrocytes oligodendrocytes and microglia focusing on psychiatric disorders such as schizophrenia mood disorders and autism Not only molecular cellular and pharmacological approaches using in vitro in vivo experimental methods but also translational research approaches are welcome Novel translational research approaches for example using novel techniques such as induced pluripotent stem iPS cells may lead to novel solutions We believe that investigations to clarify the correlation between glial cells and psychiatric disorders contribute to a novel understanding of the pathophysiology of these disorders and the development of effective treatment strategies
