Elasticity and Geometry Basile Audoly,Yves Pomeau,2010-06-24 We experience elasticity everywhere in daily life in the straightening or curling of hairs the irreversible deformations of car bodies after a crash or the bouncing of elastic balls in ping pong or soccer The theory of elasticity is essential to the recent developments of applied and fundamental science such as the bio mechanics of DNA filaments and other macro molecules and the animation of virtual characters in computer graphics and

materials science In this book the emphasis is on the elasticity of thin bodies plates shells rods in connection with geometry It covers such topics as the mechanics of hairs curled and straight the buckling instabilities of stressed plates including folds and conical points appearing at larger stresses the geometric rigidity of elastic shells and the delamination of thin compressed films It applies general methods of classical analysis including advanced nonlinear aspects bifurcation theory boundary layer analysis to derive detailed fully explicit solutions to specific problems These theoretical concepts are discussed in connection with experiments Mathematical prerequisites are vector analysis and differential equations The book can serve as a concrete introduction to nonlinear methods in analysis **Geometry of the Quintic** Jerry Michael

Shurman,1997-01-31 This book helps students at the advanced undergraduate and beginning graduate levels to develop connections between the algebra geometry and analysis that they know and to better appreciate the totality of what they have learned The text demonstrates the use of general concepts by applying theorems from various areas in the context of one problem solving the quintic The problem is approached from two directions the first is Felix Klein s nineteenth century approach using the icosahedron The second approach presents recent works of Peter Doyle and Curt McMullen which update Klein s use of transcendental functions to a solution through pure iteration **Groups, Combinatorics & Geometry** A.
