

The light, speckled moth rather than the black moth.

Activity A:
Light trees

Get the Gizmo ready:

- Click **Reset** (↺).
- Check that the **LIGHT TREES** tab is selected.

Introduction: Before the 19th century in England, the air was very clean. The bark on trees was usually light in color. Abundant **lichens** growing on tree trunks also lightened their appearance.

Question: How does the color of a peppered moth affect survival?

1. Predict: Over time, what will happen to the populations of light and dark moths on light trees?

Over time, I believe the light moths will persist and procreate as the dark moths start to fade.

2. Experiment: Click **Play** and hunt peppered moths on light tree trunks for five years. In each year, try to capture as many moths as you can. Note: You can use the **spacebar** on your keyboard to quickly advance to the next tree.

After 5 years, select the **TABLE** tab and record the percentages of each moth type. (Note: The table shows current populations of each moth, not the number of captured moths.)

Year	Dark moths	Light moths
0	50%	50%
1	50%	50%
2	41%	59%
3	39%	61%
4	28%	72%
5	29%	71%

3. Analyze: What do your results show?

According to my findings, the population of light moths is steadily rising while that of dark moths is steadily declining.

4. Apply: Which type of moth do you think was more common before the 19th century, when most trees were light in color?
