Perception and Its Modalities Dustin Stokes, Mohan Matthen, Stephen Biggs, 2014-08-28 This volume is about the many ways we perceive In nineteen new essays philosophers and cognitive scientists explore the nature of the individual senses how and what they tell us about the world and how they interrelate They consider how the senses extract perceptual content from receptor information and what kinds of objects we perceive and whether multiple senses ever perceive a single event Questions pertaining to how many senses we have what makes one sense distinct from another and whether and why distinguishing senses may be useful feature prominently Contributors examine the extent to which the senses act in concert rather than as

discrete modalities and whether this influence is epistemically pernicious neutral or beneficial Many of the essays engage with the idea that it is unduly restrictive to think of perception as a collation of contents provided by individual sense modalities Rather contributors contend that to understand perception properly we need to build into our accounts the idea that the senses work together In doing so they aim to develop better paradigms for understanding the senses and thereby to move toward a better understanding of perception
