

# HOW TO PROTECT YOURSELF AND YOUR INFORMATION ONLINE

**Use a secure and trusted browser** that protects your privacy against intrusive web trackers.

**Always verify domain names** when entering any personal data to a website. A common trick is to imitate a website you trust. Replicating a specific domain name is much more difficult.

**Use strong passwords** for all of your online accounts. Ideally, generate one using a secure password generator in your password manager.

**Never click on suspicious links, banners or pop-ups.** Obvious, but critical. Never click anything that you don't trust completely.

**Never re-use the same password.** Only use unique passwords for all your logins. If one of your accounts gets compromised, your data will remain secure.

**Enable two-factor authentication wherever available.** It adds an additional layer of security to your online accounts and makes them harder to break into.

**Verify the identity** of anyone who is asking for your personal information. If a bank reaches out to you and asks for your details, drop the call and call the official number to verify if it was really them.

**Limit all app permissions and website tracking** to absolute minimum. Maybe your calendar app doesn't really need to access your camera after all?

**Set a time in the calendar for security checkups.** Allocate time to periodically update passwords, unsubscribe from spam, delete unused apps and browser extensions - prevention is key.

**Beware of phishing scams.** Get familiar with the ways that scammers use social engineering and other tricks to scam people. When you know how the trick works, it's much easier to avoid it.

**Educate yourself.** Make an effort to read more about privacy and security to ensure you know how to stay safe and how to avoid unnecessary risks online.
