Designed as a textbook for undergraduate students in various engineering disciplines: Mechanical, Civil, Industrial Engineering, Electronics Engineering, and Computer Science, and for postgraduate students in Industrial Engineering and Water Resource Management, this comprehensive and well-organized book, now in its Second Edition, shows how complex economic decisions can be made from a number of given alternatives. It provides the managers not only a sound basis but also a clear-cut approach to making decisions. These decisions will ultimately result in minimizing costs and/or maximizing benefits. What is more, the book adequately illustrates the concepts with numerical problems and Indian cases. While retaining all the chapters of the previous edition, the book adds a number of topics to make it more comprehensive and more student-friendly. What's New to This Edition: Discusses different types of costs such as average cost, recurring cost, and life cycle cost. Deals with different types of cost estimating models, index numbers, and capital allowance. Covers the basics of nondeterministic decision making. Describes the meaning of cash flows with probability distributions and decision making and selection of alternatives using simulation. Discusses the basic concepts of Accounting. This book, which is profusely illustrated with worked-out examples and a number of diagrams and tables, should prove extremely useful not only as a text but also as a reference for those offering courses in such areas as Project Management, Production Management, and Financial Management. *Guide to Energy Management, Eighth Edition* Barney L.
