

The turnbuckle shown in Fig. 8-17 has a square thread with a mean diameter of 1 mm and a lead of 1 mm. If the coefficient of static friction between the wire and the turnbuckle is $\mu_s = 0.25$, determine the moment M that must be applied to draw the end screws closer together.

Fig. 8-17

**SOLUTION**

The moment can be obtained by applying Eq. 8-3. Since friction at two corners must be considered, this requires

$$M = 2rW \tan \phi = dW$$

Here $W = 2000 \text{ N}$, $d = \tan^{-1} \mu_s = \tan^{-1}(0.25) = 14.04^\circ$, $r = 1 \text{ mm}$, and $\theta = \tan^{-1}(1/2\pi) = \tan^{-1}(2 \text{ mm}/31.42 \text{ mm}) = 3.64^\circ$. Substituting these values into Eq. 1 and solving gives

$$\begin{aligned} M &= 2(2000 \text{ N})(1 \text{ mm}) \tan 14.04^\circ + 3.64^\circ \\ &= 874.7 \text{ N}\cdot\text{mm} = 0.875 \text{ N}\cdot\text{m} \end{aligned}$$

NOTE: When the moment is removed, the turnbuckle will be self-locking, i.e., it will not unscrew since $d_s > \theta$.

PROBLEMS

8-38. Determine the largest angle θ that will cause the wedge to be self-locking regardless of the magnitude of horizontal force P applied to the blocks. The coefficient of static friction between the wedge and the blocks is $\mu_s = 0.3$. Neglect the weight of the wedge.

Prob. 8-38

8-39. If the beam AB is loaded as shown, determine the horizontal force P which must be applied to the wedge in order to remove it from under the beam. The coefficients of static friction at the wedge's top and bottom surfaces are $\mu_{st} = 0.25$ and $\mu_{sb} = 0.35$, respectively. If $P = 0$, is the wedge self-locking? Neglect the weight and size of the wedge and the thickness of the beam.

Prob. 8-39

8-40. The wedge has a negligible weight and a coefficient of static friction $\mu_s = 0.35$ with all contacting surfaces. Determine the largest angle θ so that it is self-locking. The response for slipping for any magnitude of the force P applied to the pins.

Prob. 8-40

8-41. If the spring is compressed 40 mm and the coefficient of static friction between the inclined wedge C and the slider is $\mu_{sc} = 0.3$, determine the horizontal force P needed to move the slider forward. The nut is free to move without friction within the fixed collar D . The coefficient of static friction between A and surface B is $\mu_{AB} = 0.4$. Neglect the weights of the slider and nut.

Prob. 8-41

8-42. If $P = 20 \text{ N}$, determine the required minimum compression in the spring so that the wedge will not move to the right. Neglect the weights of A and B . The coefficient of static friction for all contacting surfaces is $\mu_s = 0.35$. Neglect friction at the rollers.

8-43. Determine the minimum applied force P required to move wedge A to the right. The spring is compressed a distance of 175 mm. Neglect the weights of A and B . The coefficient of static friction for all contacting surfaces is $\mu_s = 0.35$. Neglect friction at the rollers.

Prob. 8-43

Elemente de statică Nicolae Ursu-Fischer, Diana Ioana Popescu, 2024-02-09 Cartea de fațetă este dedicată primei ramuri a mecanicii statice oferind o prezentare clară și cuprinzătoare a noțiunilor și punând accentul pe înțelegerea conceptelor fundamentale și pe aplicarea lor în diverse contexte practice. Autorii și-au propus să facă studiul staticii cât mai accesibil și ușor de înțeles pentru cititori indiferent de nivelul lor de experiență în domeniul mecanicii. Stilul de scriere este clar și detaliat astfel încât cititorii să poată urmări ușor conceptele de bază și să înțeleagă noțiunile prezentate fără pretenția de a fi familiarizați cu terminologia sau cu matematica avansată. Exemplele practice și grafica asociată au fost inserate cu atenție pentru a ilustra conceptele și pentru a face conținutul cât mai intuitiv. Cartea conține un număr foarte mare de probleme rezolvate și propuse de diverse grade de dificultate. Unele mai accesibile, autorii au avut în vedere faptul că în prezent pregătirea în domeniul matematicii a multor studenți este deficitară, iar altele necesitând cunoștințe aprofundate din domeniile geometriei, algebrei și ale metodelor numerice. Lucrarea este structurată pe zece capitole începând cu introducerea în conceptele de bază ale mecanicii și abordând apoi gradual fiecare aspect specific al staticii: echilibrul punctului material, geometria maselor și centrele de masă, echilibrul solidului rigid, echilibrul sistemelor de puncte materiale și de solide rigide, echilibrul firelor. Pentru a asigura o înțelegere solidă a acestor subiecte, autorii au inclus la începutul lucrării un capitol dedicat calculului vectorial și calculului matriceal cu aplicații în mecanica statică precum și un capitol care tratează reducerea sistemelor de forțe.

Theory of Gyroscopic Effects for Rotating Objects Ryspek Usubamatov, 2022-06-30 This book highlights an analytical solution for the dynamics of axially rotating objects. It also presents the theory of gyroscopic effects explaining their physics and using mathematical models of Euler's form for the motion of movable spinning objects to demonstrate these effects. The major themes and approaches are represented by the spinning disc and the action of the system of interrelated inertial torques generated by the centrifugal and Coriolis forces as well as the change in the angular momentum. The interrelation of inertial

torques is based on the dependency of the angular velocities of the motions of the spinning objects around axes by the principle of mechanical energy conservation. These kinetically interrelated torques constitute the fundamental principles of the mechanical gyroscope theory that can be used for any rotating objects of different designs like rings, cones, spheres, paraboloids, propellers, etc. Lastly, the mathematical models for the gyroscopic effects are validated by practical tests. The 2nd edition became necessary due to new development and corrections of mathematical expressions. It contains new chapters about the Tipping top inversion and inversion of the spinning object in an orbital flight and the boomerang aerodynamics.
