Computers in Engineering, 1986, 1986 **Semantic Web Services** Dieter Fensel, Federico Michele Facca, Elena Simperl, Ioan Toma, 2011-04-28 A paradigm shift is taking place in computer science one generation ago we learned to abstract from hardware to software now we are abstracting from software to serviceware implemented through service oriented computing Yet ensuring interoperability in open heterogeneous and dynamically changing environments such as the Internet remains a major challenge for actual machine to machine integration Usually significant problems in aligning data processes and protocols appear as soon as a specific piece of functionality is used within a different application context The Semantic Web Services SWS approach is about describing services with metadata on the basis of domain ontologies as a means to enable their automatic location execution combination and use Fensel and his coauthors provide a comprehensive overview of SWS in line with actual industrial practice They introduce the main sociotechnological components that ground the SWS vision like Web Science Service Science and service oriented architectures and several approaches that realize it e g the Web Service Modeling Framework OWL S and RESTful services The real world relevance is emphasized through a series of case studies from large scale R D projects and a business oriented proposition from the SWS technology provider Seekda Each chapter of the book is structured according to a predefined template covering both theoretical and practical aspects and including walk through examples and hands on exercises Additional learning material is available on the book website www.swsbook.org With its additional features the book is ideally suited as the basis for courses or self study in this field and it may also serve as a reference for researchers looking for a state of the art overview of formalisms methods tools and applications related to SWS Research and Technology Buildings Hardo Braun, Dieter Grömling, 2005-04-08 A handbook on planning and designing architecture for research and technology with 70 up to date international case studies of built works by architects such as Foster and Partners Nicholas Grimshaw Herzog de Meuron Sauerbruch Hutton and Nicholas Grimshaw **Design Methodology for Future Products** Dieter Krause, Emil Heyden, 2021-12-13 Design Methodology for Future Products Data Driven Agile and Flexible provides an overview of the recent research in the field of design methodology from the point of view of the members of the scientific society for product development WiGeP

Wissenschaftliche Gesellschaft für Produktentwicklung e.V. This book aims to contribute to design methods and their implementation for innovative future products. The main focus is the crucial data driven agile and flexible way of working. Four topics are covered in corresponding chapters: Methods for Product Development and Management, Methods for Specific Products and Systems, Facing the Challenges in Product Development and Model Based Engineering in Product Development. This publication starts with the agile strategic foresight of sustainable mechatronic and cyber physical systems, moves on to the topics of system generation engineering in development processes followed by the technical inheritance in data driven product development. Product improvements are shown via agile experiential learning based on reverse engineering and via combination of usability and emotions. Furthermore, the development of future oriented products in the field of biomechatronic systems, sustainable mobility systems and in situ sensor integration is shown. The overcoming of challenges in product development is demonstrated through context adapted methods by focusing on efficiency and effectiveness as well as designer centered methods to tackle cognitive bias. Flow design for target oriented availability of data and information in product development is addressed. Topics of model based systems engineering are applied to the function driven product development by linking model elements at all stages and phases of the product. The potential of model based systems engineering for modular product families and engineering of multidisciplinary complex systems is shown.

Implementing Semantic Web Services Dieter Fensel, Mick Kerrigan, Michal Zaremba, 2008-09-16. Service oriented computing has become one of the predominant factors in IT research and development efforts over the last few years. In spite of several standardization efforts that advanced from research labs into industrial strength technologies and tools, there is still much human effort required in the process of finding and executing Web services. Here Dieter Fensel and his team lay the foundation for understanding the Semantic Web Services infrastructure aimed at eliminating human intervention and thus allowing for seamless integration of information systems. They focus on the currently most advanced SWS infrastructure, namely SESA and related work such as the Web Services Execution Environment (WSMX) activities and the Semantic Execution Environment (OASIS SEE) TC standardization effort. Their book is divided into four parts. Part I provides an introduction to the field and its history, covering basic Web technologies and the state of research and standardization in the Semantic Web field. Part II presents the SESA architecture. The authors detail its building blocks and show how they are consolidated into a coherent software architecture that can be used as a blueprint for implementation. Part III gives more insight into middleware services, describing the necessary conceptual functionality that is imposed on the architecture through the basic principles. Each such functionality is realized using a number of so called middleware services. Finally, Part IV shows how the SESA architecture can be applied to real world scenarios and provides an overview of compatible and related systems. The book targets professionals as well as academic and industrial researchers working on various aspects of semantic integration of distributed information systems. They will learn how to apply the Semantic Web Services.

infrastructure to automate and semi automate tasks by using existing integration technologies In addition the book is also suitable for advanced graduate students enrolled in courses covering knowledge management the Semantic Web or integration of information systems as it will educate them about basic technologies for Semantic Web Services and general issues related to integration of information systems

Smart Building Design Maad Bali, Dietmar A. Half, Dieter Polle, Jürgen Spitz, 2019-01-29 How can smart technology open up new design opportunities for the design the execution and the operation of buildings and for the digitalization of construction A hitherto unusual conception of the building as a cybernetic architectural system forms the basis of this integrated design approach The authors architects and engineers with extensive design experience contribute an overview of current technical components of automation and communication systems as well as a summary of relevant laws standards and guidelines Six example projects demonstrate completed applications at different scales from a single family residence to office buildings and through to the Elbphilharmonie concert hall amply illustrated in text drawings and photos

Learning and Soft Computing Vojislav Kecman, 2001 This textbook provides a thorough introduction to the field of learning from experimental data and soft computing Support vector machines SVM and neural networks NN are the mathematical structures or models that underlie learning while fuzzy logic systems FLS enable us to embed structured human knowledge into workable algorithms The book assumes that it is not only useful but necessary to treat SVM NN and FLS as parts of a connected whole Throughout the theory and algorithms are illustrated by practical examples as well as by problem sets and simulated experiments This approach enables the reader to develop SVM NN and FLS in addition to understanding them The book also presents three case studies on NN based control financial time series analysis and computer graphics A solutions manual and all of the MATLAB programs needed for the simulated experiments are available
