Membrane Transporters and Channels as Targets for Drugs Graça Soveral, Cesare Indiveri, 2020-01-03 Transporters and channels are membrane proteins that mediate the traffic of metabolites water and ions across biological membranes Membrane transport proteins are crucial to maintain homeostasis and assure cell survival upon intracellular or environmental stress A failure of any of these transport systems may have dramatic consequences for cell function There is increasing evidence that membrane transport proteins play important functions in healthy conditions and that their absence or dysfunction may cause diseases In recent years much attention has been paid to diseases resulting from defective transporters carrier diseases and ion channels channelopathies Very interestingly altered expression of transporters has been described in several human pathologies On this basis many transport proteins are well acknowledged targets for drugs Many others are involved in drug delivery and disposition and or are considered potential targets Others are off targets for drugs and then are responsible for side effects Thus membrane protein drug discovery is now an emerging field where the

search for physiological mechanisms of regulation and for chemical compounds as modulators of transport activity present new opportunities for drug development and for new therapies This Research Topic addresses the latest research advances in membrane transport proteins stimulating future research on these important protein families     **British Abstracts** ,1952
