Climate Change 2021 - The Physical Science Basis Intergovernmental Panel on Climate Change (IPCC), 2023-07-26
The Working Group I contribution to the Sixth Assessment Report of the Intergovernmental Panel on Climate Change IPCC provides a comprehensive assessment of the physical science basis of climate change. It considers in situ and remote observations, paleoclimate information, understanding of climate drivers and physical, chemical, and biological processes and feedbacks, global and regional climate modelling, advances in methods of analyses, and insights from climate services. It assesses the current state of the climate, human influence on climate in all regions, future climate change, including sea level rise, global warming effects, including extremes, climate information for risk assessment, and regional adaptation, limiting climate change by reaching net zero carbon dioxide emissions, and reducing other greenhouse gas emissions, and benefits for air quality. The report serves policymakers, decision makers, stakeholders, and all interested parties with the latest policy relevant information on climate change. Available as Open Access on Cambridge Core. [Ocean Circulation in Three Dimensions](#) Barry A. Klinger, Thomas W. N. Haine, 2019-03-14. An innovative survey of large scale ocean circulation that links observations, conceptual models, numerical models, and theories. [Eco-Resilience Biology](#) Amit Kumar, Rajesh Kaushal, 2025-12-12. The book *Eco Resilience Biology: An Exploration of Climate Forest Connection* offers comprehensive information on the dynamic interactions between forest ecosystems and changing climate regimes. As climate change accelerates, understanding the resilience mechanisms within forest biomes becomes critical for ensuring biodiversity, ecosystem services, and sustainable human livelihoods. This book aims to bridge the knowledge gap by exploring eco resilience from biological, ecological, and climate perspectives, providing an integrated framework for students, researchers, and policymakers. With an emphasis on interdisciplinary insights, this volume delves into how forest species adapt and respond to climatic stressors through physiological plasticity, functional trait shifts, and ecological feedback loops. It investigates both natural resilience and the potential for enhancing adaptive capacity through human interventions like forest management, conservation, planning, and restoration ecology. Unlike existing works, this book uniquely blends empirical case studies, theoretical models, and cutting edge scientific findings to present a holistic view of forest resilience. **Key Features**
Explores plant functional traits and species adaptation mechanisms under climate stress.
Addresses forest climate feedback, carbon sequestration, and ecosystem stability.
Integrates traditional ecological knowledge with modern scientific approaches.
Discusses resilience assessment tools and strategies for forest policy and planning.
Case studies from diverse forest ecosystems, including tropical, temperate, and boreal zones.
Eco Resilience Biology is ideal for a wide range of readers, including environmental scientists, forest ecologists, conservation biologists, climate researchers, and students of ecological and environmental sciences. It is also suitable as a textbook for graduate, postgraduate, and Ph D students in fields such as agriculture, botany, plant physiology, forestry, biotechnology, environmental science, and agroforestry. **Studies in the**
