The Economic Organisation of a Financial System Edwin Neave, 2017-11-30 Originally published in 1991 The Economic Organisation of a Financial System develops a descriptive

theory of a financial system's organisation and functions and applies the theory of organisational economics to the study of a financial system. The book attempts to reconcile neoclassical financial theory and managerial finance by synthesising the main findings of these studies within an institutional economics framework. The book helps to relate the complementary perspectives of current theory and current practice and aims to strengthen the relations between both theory and practice. The book's contents provide a detailed illustration of how organisational economics can be put to work. Financial Economics Jürgen Eichberger, Ian Rainy, Lance Harper, 1997. Financial economics is an exciting new field of study that integrates the theory of finance and financial institutions into the main body of economic theory. In doing so it draws on insights from general equilibrium analysis, information economics and the theory of contracts. Financial Economics is a self-contained and comprehensive introduction to the field for advanced undergraduate and postgraduate economists and finance specialists. It develops the main ideas in finance theory including the CAPM, arbitrage pricing, option pricing and the Modigliani-Miller theorem within an economic framework. Students of economics are shown how finance theory derives from foundations in economic theory while students of finance are given a firmer appreciation of the economic logic underlying their favourite results. Financial Economics provides all the technical apparatus necessary to read the modern literature in financial economics and the economics of financial institutions. The book is self-contained in that the reader is guided through branches of the theory as necessary in order to understand the main topics. Numerous examples and diagrams illustrate the key arguments and the main chapters are followed by guides to the relevant literature and exercises for students.

Financial Networks Anna Nagurney, Stavros Siokos, 2012-12-06. Financial analysis is concerned with the study of capital flows over time and space. This book presents a new theory of multi-sector, multi-instrument financial systems based on the visualization of such systems as networks. The framework is both qualitative and computational and depends crucially on the methodologies of finite-dimensional variational inequality theory for the study of statics and equilibrium states and on projected dynamical systems for the study of dynamics and disequilibrium behavior. Moreover, it adds a graphical dimension to the fundamental economic structure of financial systems and their evolution through time.
