This open access book shows how citizens' involvement in geohazard risks prevention can strengthen regional and national risk management systems to demonstrate a new form of engagement between civil society and local authorities. The lessons learned in this book, where the local communities were engaged to actively participate in risk preparedness and monitoring and incorporate local capacities into risk management systems, are reported. A cooperation and resource platform on geohazards risk assessment, preparedness, mitigation and prevention was used as an interface between the citizens and the risk management system. A more efficient uptake of Copernicus data products and services on regional level is discussed to improve geohazard risk prevention and resilience to natural disasters. Recommendations for the creation of future observatories in response to the widest range of hazards, both natural and human induced in Europe and in the world, are provided.
