Sterility, Sterilisation and Sterility Assurance for Pharmaceuticals Tim Sandle, 2013-10-31 Failure to adequately control any microbial challenge associated within process or product by robust sterilisation will result in a contaminated marketed product with potential harm to the patient. Sterilisation is therefore of great importance to healthcare and the manufacturers of medical devices and pharmaceuticals. Sterility, sterilisation and sterility assurance for pharmaceuticals examines different means of rendering a product sterile by providing an overview of sterilisation methods including heat, radiation and filtration. The book outlines and discusses sterilisation technology and the biopharmaceutical manufacturing process including aseptic filling as well as aspects of the design of containers and packaging as well as addressing the cleanroom environments in which products are prepared. Consisting of 18 chapters, the book comprehensively covers sterility, sterilisation and microorganisms, pyrogenicity and bacterial endotoxins, regulatory requirements and good manufacturing practices and gamma radiation. Later chapters discuss e-beam, dry heat, steam sterilisation, sterilisation by gas vapour, sterilisation and sterile filtration. Before final chapters analyse depyrogenation, cleanrooms, aseptic processing media, simulation, biological indicators, sterility testing, auditing and new sterilisation techniques. Covers the main sterilisation methods of physical removal, physical alteration and inactivation. Includes discussion of medical devices aseptically filled products and terminally sterilised products. Describes bacterial pyrogenic and endotoxin risks to devices and products.

Life Cycle Assessment (LCA) of Environmental and Energy Systems Fabrizio Passarini, Luca Ciacci, 2021-04-01 The transition towards renewable energy sources and green technologies for energy generation and storage is expected to mitigate the climate emergency in the coming years. However, in many cases, this progress has been hampered by our dependency on critical materials or other resources that are often processed at high environmental burdens. Yet many studies have shown that environmental and energy issues are strictly interconnected and require a comprehensive understanding of resource management strategies and their implications. Life cycle assessment (LCA) is among the most inclusive analytical techniques to analyze sustainability benefits and trade-offs within complex systems and in this Special Issue it is applied to assess the mutual influences of environmental and energy dimensions. The selection of original articles, reviews and case studies addressed covers some of the main driving applications for energy requirements and greenhouse gas emissions including power generation, bioenergy, biorefinery, building and transportation. An insightful perspective on the current topics and technologies and emerging research needs is provided. Alone or in combination with integrative methodologies, LCA can be of pivotal importance and constitute the scientific foundation on which a full system understanding can be reached.
