**Routledge Handbook of the Economics of Knowledge** Cristiano Antonelli, Albert Link, 2014-12-05. The Routledge Handbook of the Economics of Knowledge provides a comprehensive framework to integrate the advancements over the last 20 years in the analysis of technological knowledge as an economic good and in the static and dynamic characteristics of its generation process. There is a growing consensus in the field of economics that knowledge technological knowledge in particular is one of the most relevant resources of wealth yet it is one of the most difficult and complex activities to understand or even to conceptualize. The economics of knowledge is an emerging field that explores the generation, exploitation and dissemination of technological knowledge. Technological knowledge cannot any longer be regarded as a homogenous good that stems from standardized generation processes. Quite the opposite, technological knowledge appears more and more to be a basket of heterogeneous items, resources and even experiences. All of these sources which are both internal and external to the firm are complementary as is the interplay between a bottom up and top down generation processes. In this context, the interactions between the public research system, private research laboratories and various networks of learning processes within and among firms play a major role in the creation of technological knowledge. In this Handbook, special attention is given to the relationship among technological knowledge and both upstream scientific knowledge and related downstream resources. By addressing the antecedents and consequences of technological knowledge from both an upstream and downstream perspective, this Handbook will become an indispensable tool for scholars and practitioners aiming to master the generation and the use of technological knowledge.

*Transdisciplinary Engineering Methods for Social Innovation of Industry 4.0* M. Peruzzini, M. Pellicciari, C. Bil, 2018-09-14. The concept of concurrent engineering (CE) was first developed in the 1980s. Now often referred to as transdisciplinary engineering, it is based on the idea that different phases of a product life cycle should be conducted concurrently and initiated as early as possible within the Product Creation Process (PCP). The main goal of CE is to increase the efficiency and effectiveness of the PCP and reduce errors in later phases as well as incorporating considerations including environmental implications for the full lifecycle of the product. It has become a substantive methodology in many industries and has also been adopted in the development of new services and service support. This book presents the proceedings of the 25th ISPE Inc International Conference on Transdisciplinary Engineering held in Modena, Italy, in July 2018. This international conference attracts researchers, industry experts, students and government representatives interested in recent transdisciplinary engineering research advancements and applications. The book contains 120 peer reviewed papers selected from 259 submissions from all continents of the world, ranging from the theoretical and conceptual to papers addressing industrial best practice and is divided into 11 sections reflecting the themes addressed in the conference program and addressing topics as diverse as Industry 4.0 and smart
