©Harvard Medical School 2009

Our organisms manufacture antibodies automatically to many molecules, proteins, and microorganisms. Among others, when foreign red-cell surface glycoproteins (antigens) are in the bloodstream they stimulate the immune system to manufacture antibodies against them. These antibodies (antibodies) are proteins that bind to the antigens and cause them to be removed from the body. The antibodies are called **anti** (against) because they bind to antigens that are **foreign** (not self) substances that do not belong in the bloodstream.

a. How many of Model 1's body types blood types are found in the human population?

b. Which blood is used in Model 1 to represent anti-A antigens?
