Dynamics in the Human Body Saul Goldman, Manuel Solano-Altamirano, Kenneth Ledez, 2017-09-28 Gas Bubble Dynamics in the Human Body provides a broad range of professionals from physicians working in a clinic hospital or hyperbaric facility to physical scientists trying to understand and predict the dynamics of gas bubble behavior in the body with an interdisciplinary perspective on gas bubble disease Both iatrogenic and decompression induced gas bubbles are considered The basic medical and physiological aspects are described first in plain language with numerous illustrations that facilitate an intuitive grasp of the basic underlying medicine and physiology Current issues in the field particularly microbubbles and microparticles and their possible role in gas bubble disease are included The physical and mathematical material is given at

several levels of sophistication with the hard core math separated out in sections labelled For the Math Mavens so that the basic concepts can be grasped at a descriptive level The field is large and multi disciplinary so that some of the discussion that is at a greater depth is given separately in sections labelled In Greater Detail Skipping these sections for whatever reason shouldn't materially hamper acquiring an overall appreciation of the field Demonstrates how physical and mathematical tools help to solve underlying problems across physiology and medicine Helps researchers extend their competence and flexibility to the point that they can personally contribute to the field of hyperbaric medicine and physiology or to other related biological problems that may interest them Provides clinicians with explicit examples of how mathematical modelling can be integrated into clinical treatment and decision making
