Marilyn A. Brown, Yu Wang, 2015-09-29 This landmark work lauds the benefits of decreased energy consumption investigating its relationship to public policy and analyzing its potential billion dollar benefits to the U S economy U S consumers tend to use energy indiscriminately something they may no longer be able to do with impunity This game changing book asserts that reducing energy consumption should be a frontline strategy to address global climate change threats to energy security and the challenge of grid reliability The book supports two bold arguments that policies motivating greater investment in high energy efficiency should be a priority and that energy efficiency can help the nation in times of crisis To make their case for the necessity of prioritizing demand reduction the authors examine the policies and markets operating in a number of leading cities states and nations across the globe to uncover the keys to their success These examples show how demand side strategies can significantly reduce pollution cut costs and make the electric grid more resilient The authors explain why these technologies are not widely adopted and assess the potential savings they can produce The book will be an eye opener for policymakers energy professionals and the public as it demonstrates how cost effective demand reduction policies can improve air quality strengthen electricity markets and generate jobs

Trends and Challenges in Maritime Energy Management Aykut I. Ölçer, Momoko Kitada, Dimitrios Dalaklis, Fabio Ballini, 2018-05-03 This book provides an overview of contemporary trends and challenges in maritime energy management MEM Coordinated action is necessary to achieve a low carbon and energy efficient maritime future and MEM is the prevailing framework aimed at reducing greenhouse gas emissions resulting from maritime industry activities The book familiarizes readers with the status quo in the field and paves the way for finding solutions to perceived challenges The 34 contributions cover six important aspects regulatory framework energy efficient ship design energy efficient ship and port operation economic and social dimensions alternative fuels and wind assisted ship propulsion and marine renewable energy This pioneering work is intended for researchers and academics as well as practitioners and policymakers involved in this important field

Driving Automation Mark S. Young, Neville A. Stanton, 2023-03-10 The technology behind self driving cars is being heavily promulgated as the solution to a variety of transport problems including safety congestion and impact on the environment This text examines the key role that human factors plays in driving forward future vehicle automation in a way that realizes the benefits while avoiding the pitfalls Driving Automation A Human Factors Perspective addresses a range of issues related to vehicle automation beyond the can we to how should we It covers important topics including mental workload and malleable attentional resources theory effects of automation on driver performance in vehicle interface design driver monitoring eco driving responses to automation failure and human centred automation The text will be useful for graduate students and professionals in diverse areas such as ergonomics human factors automobile engineering industrial engineering mechanical engineering and health and safety

Agricultural Reform in Rwanda Chris Huggins, 2017-10-15 International observers have lauded Rwanda as an example of an African country taking control of its own development trajectory and as a market friendly destination for investment A

key component of this narrative has been an ambitious programme of agricultural reform involving private firms NGOs and international charities The Rwandan government claims these reforms have been a resounding success tripling crop yields and helping to combat hunger Chris Huggins argues however that Rwanda s liberal modernising image sits poorly with the regime s continuing authoritarian tendencies Featuring in depth case studies of the effects of agricultural reform in three different regions and drawing on hundreds of interviews Huggins shows that the much vaunted liberalization of agriculture has in fact depended on the coercion of Rwandan farmers and in many cases has had a detrimental impact on their livelihoods With the Kagame regime now coming under increasing international scrutiny this work provides a timely look at the impact of market friendly authoritarianism in contemporary Africa making essential reading for students and scholars of development in the fields of sociology anthropology political science and economics

Sustainable Energy Systems on Ships Francesco Baldi,Andrea Coraddu,Maria E. Mondejar,2022-07-21 Sustainable Energy Systems on Ships is a comprehensive technical reference for all aspects of energy efficient shipping The book discusses the technology options to make shipping energy consumption greener focusing on the smarter integration of energy streams the introduction of renewable resources and the improvement of control and operability Chapters not only describe each technology individually but also analyze their interconnections when implemented onboard and compare them in terms of suitability for different vessels and economic viability Readers of Sustainable Energy Systems on Ships will find an invaluable reference suitable for researchers professionals and managers involved in the shipping industry and those working on related energy efficiency technologies fuel cells and in the transport industry generally Students of maritime engineering will also be well served by this reference Clear analysis of the current implementation status of each technology discussed the barriers for further development and the potential for large scale implementation Enables decision making on the most suitable technologies for each type of vessel Integrates energy efficiency and emission control rules regulations technologies including data science and challenges in relation to the shipping industry Includes industry case studies on the integration of novel energy conversion technologies and renewable energy sources in operating ships

Natural Gas Engines Kalyan Kumar Srinivasan,Avinash Kumar Agarwal,Sundar Rajan Krishnan,Vincenzo Mulone,2018-11-03 This book covers the various advanced reciprocating combustion engine technologies that utilize natural gas and alternative fuels for transportation and power generation applications It is divided into three major sections consisting of both fundamental and applied technologies to identify but not limited to clean high efficiency opportunities with natural gas fueling that have been developed through experimental protocols numerical and high performance computational simulations and zero dimensional multizone combustion simulations Particular emphasis is placed on statutes to monitor fine particulate emissions from tailpipe of engines operating on natural gas and alternative fuels

Human Systems Integration for Mining Automation Robin Burgess-Limerick,Tim Horberry,Danellie Lynas,Andrew Hill,Joel M Haight,2025-02-12 Human Systems Integration for Mining

Automation is the professional's guide to understanding the issues, approaches and pitfalls associated with mining automation from a human perspective. This book delves into a timely and fast developing issue in mining and the wider minerals industry: the design and deployment of automation. The book approaches this from a Human Systems Integration standpoint in which the technical and human related aspects are jointly considered as part of an integrated automated mining system. This accessible and readable title offers a wider Human Systems Integration framework that can be applied to mining projects. It is based on an established framework that has been developed and used successfully in other work. The framework is backed up with information obtained from mines in Australia, the USA, Canada, Sweden and Chile and original equipment manufacturers such as Caterpillar, Komatsu, Sandvik and Epiroc. Every reader of this book will recognise the essential benefits of human systems integration for mining automation. This book will be an ideal read for industry professionals including systems engineers, safety engineers, mining engineers, human factors engineers and engineers working on developing and deploying automation in mining and related industries including rail, road transport and process control. It will also be of interest to students, researchers and academics in related fields.

Brick Architecture Craft in Nineteenth-Century South India Priya Joseph, 2025-03-18. This book explores brick architecture of the nineteenth century in South India through the lens of tectonics and materiality. The book is a diachronically elaborated history of brick architecture, especially analysing the hybridity due to the indigenous and colonial intersections of nineteenth century India. It offers a decolonial reading of architecture through meticulous measured drawings as a tool and presents an argument for reading buildings as archives. South India has thousands of dilapidated buildings which may be erased due to neglect, lax laws and ignorance. The book exposes the tectonics, fixing material choices, socio-political circumstances of this architecture in brick. This method of analysing the dilapidated buildings as an archive of construction forefronts the makers and the agency of the local craftspeople rather than an Anglo-centric gaze. Brick buildings such as the extravagantly ornamental and structurally rich Chatrams of Thanjavur, Rosary Church, Hassan and Fort School, Bengaluru are some of the many cases elaborated in the book. The book connects the history of brick to its many contemporary challenges and manifestations. The book is intended for students and scholars of architecture history, material culture, colonial studies and the Global South as well as anyone interested in brick as material for architecture.

South Africa's Energy Transition Tobias Bischof-Niemz, Terence Creamer, 2018-07-11. South Africa's energy transition has become a highly topical, emotive and politically contentious topic. Taking a systems perspective, this book offers an evidence-based roadmap for such a transition and debunks many of the myths raised about the risks of a renewable energy-led electricity mix. Owing to its formidable solar and wind resources, South Africa has an almost unparalleled opportunity to turn solar photovoltaic and onshore wind generators into the country's power generation workhorses, a role hitherto played by coal. This book shows that a renewables-led mix will not only provide the lowest cost but will also create more jobs than any of the alternatives currently under

consideration In addition it offers a glimpse of how South Africa's low cost and decarbonised electricity system can power a competitive industrial economy an electric mobility revolution and in the long run create new export opportunities This book will be of great interest to energy industry practitioners as well as students and scholars of energy policy and politics environmental economics and sustainable development

The Enigmatic Realm of **Manual Focus 2015 Diesel**: Unleashing the Language is Inner Magic
