Quantification and qualification of the environmental impacts of milk processing in The Republic of Armenia using Life Cycle Assessment methodology with particular focus on product- and process-related quality attributes Sonika Aminforoughi,2015-03-06 Environmental Life Cycle Assessment ELCA is a young but increasingly a well known technique to assess the environmental impacts associated with products In this dissertation thesis a product process related ELCA for a typical Armenian dairy factory has been performed Here the environmental impacts associated with the manufacturing

processes of selected dairy products have been investigated The production of raw milk at the supplier dairy farm and the disposal of the solid waste and waste water incurred during production and processing have been considered as well Due to the multi functional nature of dairy factories an allocation procedure according to the calorific value of each product under assessment has been conducted In order to execute the ELCA the software SimaPro has been used As the methodology for Life Cycle Impact Assessment the ReCiPe Midpoint method has been applied Inventory characterization normalization contribution and sensitivity analyses have been carried out accordingly The results of these analyses have determined the significant impact categories by each analyzed product and the products with the greatest environmental impacts Furthermore the hotspots of the processes have been determined
