**Rock Mechanics for Natural Resources and Infrastructure Development - Full Papers** Sergio A.B. Fontoura, Ricardo Rocca, José Mendoza, 2019-09-03

Rock Mechanics for Natural Resources and Infrastructure Development contains the proceedings of the 14th ISRM International Congress ISRM 2019 Foz do Iguaçu, Brazil, 13-19 September 2019. Starting in 1966 in Lisbon, Portugal, the International Society for Rock Mechanics and Rock Engineering (ISRM) holds its Congress every four years. At this 14th occasion, the Congress brings together researchers, professors, engineers, and students around contemporary themes relevant to rock mechanics and rock engineering. Rock Mechanics for Natural Resources and Infrastructure Development contains 7 Keynote Lectures and 449 papers in ten chapters covering topics ranging from fundamental research in rock mechanics, laboratory and experimental field studies, and petroleum mining and civil engineering applications. Also included are the prestigious ISRM Award Lectures: the Leopold Muller Award Lecture by professor Peter K. Kaiser and the Manuel Rocha Award Lecture by Dr. Quinghua Lei. Rock Mechanics for Natural Resources and Infrastructure Development is a must read for academics, engineers, and students involved in rock mechanics and engineering. *Proceedings in Earth and Geosciences, Volume 6*. The Proceedings in Earth and Geosciences series contains proceedings of peer-reviewed international conferences dealing in earth and geosciences. The main topics covered by the series include geotechnical engineering, underground construction, mining, rock mechanics, soil mechanics, and hydrogeology.

**Advances in Computer Science and Information Engineering** David Jin, Sally Lin, 2012-05-11. CSIE2012 is an integrated conference concentrating its focus on Computer Science and Information Engineering. In the proceeding, you can learn much more knowledge about Computer Science and Information Engineering of researchers from all around the world. The main role of the proceeding is to be used as an exchange pillar for researchers who are working in the mentioned fields. In order to meet the high quality of Springer AISC series, the organization committee has made their efforts to do the following things: Firstly, poor quality paper has been refused after reviewing course by anonymous referee experts. Secondly, periodically review meetings have been held around the reviewers about five times for exchanging reviewing suggestions. Finally, the conference organizers had several preliminary sessions before the conference. Through efforts of different people and departments, the conference will be successful and fruitful.

**Twentieth Army Science Conference - Award Winning Papers** Michael S. Shur, Michael A. Strosio, Richard Chait, Catherine Kominos, James J. Valdes, 1997-06-19. This important volume contains the 21 prize-winning papers presented at the Twentieth United States Army Science Conference under the sponsorship of the Assistant Secretary of the Army for Research Development and Acquisition. Original scientific and technical papers written by U.S. Army civilian and military scientists and

engineers addressed the role of science and technology in providing a competitive edge for Force XXI The papers in this book are in the following key technical areas advanced materials and manufacturing including structures and energetics microelectronics and photonics sensors and information processing including communications high performance computing and simulation including modeling displays artificial intelligence and virtual reality advanced propulsion technologies including mobility and lethality power generation storage and conditioning including directed energy biological chemical and nuclear defense life medical and behavioral sciences including individual sustainability and soldier system interface environmental sciences and geosciences including atmospheric space and environmental protection engineering sciences including robotics mechanics fluid dynamics and survivability

**Structured Matrices in Mathematics, Computer Science, and Engineering II** Vadim Olshevsky, 2001 The collection of the contributions to these volumes offers a flavor of the plethora of different approaches to attack structured matrix problems The reader will find that the theory of structured matrices is positioned to bridge diverse applications in the sciences and engineering deep mathematical theories as well as computational and numerical issues The presentation fully illustrates the fact that the techniques of engineers mathematicians and numerical analysts nicely complement each other and they all contribute to one unified theory of structured matrices Back cover

**Collected Works (volume 1): Published Papers** Stephen Luttrell, 2023-10-24 The motivation for the research that is described in these volumes is the wish to explain things in terms of their underlying causes rather than merely being satisfied with phenomenological descriptions When this reductionist approach is applied to information processing it allows the internal structure of information to be analysed so information processing algorithms can then be derived from first principles One of the simplest examples of this approach is the diagonalisation of a data covariance matrix there are many variants of this basic approach such as singular value decomposition in which the assumed independent components of high dimensional data are identified and extracted The main limitation of this type of information analysis approach is that it is based on linear algebra applied globally to the data space so it is unable to preserve information about any local data structure in the data space For instance if the data lives on a low dimensional curved manifold embedded in the data space then only the global properties of this manifold would be preserved by global linear algebra methods In practice data whose high dimensional structure is non trivial typically lives on a noisy version of a curved manifold so techniques for analysing such data must automatically handle this type of structure For instance a blurred image of a point source is described by its underlying degrees of freedom i.e. the position of the source and as the source moves about it generates a curved manifold that lives in the high dimensional space of pixel values of the sampled image The basic problem is then to deduce the internal properties of this manifold by analysing examples of such images A more challenging problem would be to extend this analysis to images that contain several overlapping blurred images of point sources and so on There is no limit to the complexity of the types of high dimensional data that one might want to analyse These methods

then need to be automated so that they do not rely on human intervention which would then allow them to be inserted as components into information processing networks The purpose of the research that is described in these volumes is to develop principled information processing methods that can be used for such analysis Self organising information processing networks arise naturally in this context in which ways of cutting up the original manifold into simpler pieces emerge automatically

*Information Science and Electronic Engineering* Dongxing Wang, 2016-12-08 Information Science and Electronic Engineering is a collection of contributions drawn from the International Conference of Electronic Engineering and Information Science ICEEIS 2016 held January 4 5 2016 in Harbin China The papers in this proceedings volume cover various topics including Electronic Engineering Information Science and Information Technologies Computational Mathematics and Data Mining Image Processing and Computer Vision Communication and Signal Processing Control and Automation of Mechatronics Methods Devices and Systems for Measurement and Monitoring Engineering of Weapon Systems Mechanical Engineering and Material Science Technologies of Processing The content of this proceedings volume will be of interest to professionals and academics in the fields of Electronic Engineering Computer Science and Mechanical Engineering
