Building the Network of the Future John Donovan,Krish Prabhu,2017-06-26 From the Foreword This book lays out much of what we ve learned at AT T all while managing one of the biggest networks in the world It is an amazing feat that will put AT T in a leading position for years to come Jim Zemlin Executive Director The Linux Foundation This book is based on the lessons learned from AT T s software transformation journey starting in 2012 when rampant traffic growth necessitated a change in network architecture and design Using new technologies such as NFV SDN Cloud and Big Data AT T s engineers outlined and implemented a radical network transformation program that dramatically reduced capital and operating expenditures This book describes the transformation in substantial detail The subject matter is of great interest to telecom professionals worldwide as well as academic researchers looking to apply the latest techniques in computer science to solving telecom s big problems around scalability resilience and survivability

Value Management in Healthcare Nathan William Tierney,2025-02-13 Our current healthcare system is broken The Organisation for Economic Co operation and Development OECD predicts healthcare costs could increase from 6% to 14% of GDP by 2060 The cause of this increase is due to 1 a global aging population 2 growing affluence 3 rise in chronic diseases

and 4 better informed patients all of which raises the demand for healthcare In 2006 Michael Porter and Elizabeth Teisberg authored the book Redefining Health Care Creating Value Based Competition on Results In it they present their analysis of the root causes plaguing the healthcare industry and make the case for why providers suppliers consumers and employers should move toward a patient centric approach that optimizes value for patients According to Porter value for patients should be the overarching principle for our broken system Given the current state of global healthcare there is urgency to achieve widespread adoption of this new approach The updated second edition of this book discusses two major issues driving the importance of value based care The first is the emergence of artificial intelligence which has the potential to significantly impact and enhance value based healthcare in several ways such as delivering personalized medicine predictive analytics for patient outcomes and improving population health management The second issue is why value based care continues to struggle in scaling While value based healthcare has shown promise in improving patient outcomes and controlling costs there have been challenges in implementation such as transitioning from the traditional fee for service model data interoperability issues and limited standardization of health outcomes These challenges do not necessarily mean that value based healthcare has failed Instead they highlight the complexities of the work involved and the need to follow a process as provided in this book The intent of this book is to equip all healthcare delivery organizations with a guide for putting the value based concept into practice With updated material and case studies this book defines the practice of value based healthcare as value management The book explores Mr Porter s value equation Value Costs Outcomes which is central to value management and provides a step by step process for how to calculate the components of this equation On the outcomes side the book presents the value realization framework which translates organizational mission and strategy into a comprehensive set of performance measures and contextualizes the measures for healthcare delivery
