Worldwide two million people are killed by work each year Yet with the exception of high profile cases such as the gas leak at Bhopal India which killed tens of thousands this crime wave fails to attract the interest of the politicians the media or least forgiveably of all the knowledge industry of criminology This book is concerned with crimes against worker and public safety providing an account and analysis of this increasingly important field and setting this within the broader context of corporate and white collar crime It uses case studies and original analyses of official data to illustrate key points and themes drawing upon both well known and high profile instances of safety crimes as well the mass of ubiquitous mundane or routine deaths and injuries Thus the book examines how much safety crime is there how are such offences rendered invisible and how can their extent be unearthed accurately Throughout the book the authors analyse the social legal and political processes that ensure that safety crimes remain subject to under enforcement and under criminalisation This analysis identifies key moments in the historical development of criminal law and regulation and assesses the prospects for criminalising safety crimes in the context of contemporary neo liberal regulatory policies The theoretical and political justifications for dominant approaches to the regulation and sanctioning of safety criminals are subject to critique in order to develop alternative more effective means of criminalisation and punishment The book concludes with an original analysis of safety crimes that allows us to understand the complexities of the conditions of their production and develop a more realistic appraisal of the prospects for their amelioration

Health and Safety Strategies 2007: Case Report, *An Alternative Way of Managing Health & Safety* Jose D. Perezgonzalez, 2005-06-30. An Alternative Way of Managing Health & Safety offers the theoretical frame of a generic systems model for the management of health, safety and related topics.

Construction Safety Management, A Systems Approach Jose D. Pérezgonzález, 2005. The few models on safety management that are available tend to explain a procedure to manage safety rather than a safety management

system The research carried out here however models safety management by transforming a common procedural model i.e. the HSE's model 1997 into a functional systems representation The overall goal of the model is to offer clear graphic lines of influence of its different components on organisational safety The model is innovative not in the components that it considers but in the representation of those components which details relative distances between elements and therefore opens doors to model driven hypotheses which account for those distances Therefore hypotheses are more accurate in their predictions This model is firstly explored in the construction sector Results from this exploratory research support the adequacy of the model to understanding safety management and encourage future research of a more confirmatory nature
