Faith in Foreign Aid Susan Turner Haynes, 2024-07-12 The United States contributes more foreign aid than any other state in the world and it is often recognized as a leader in engaging religious organizations in aid delivery Faith in Foreign Aid is the first book to closely examine how the relationship between religious organizations and USAID plays out in practice Faith in Foreign Aid relies on an original dataset to trace faith based funding patterns in US foreign aid from 2001 to 2021 The findings show that despite America's push to engage religious organizations in aid the total number of religious organizations it funds is relatively low especially when compared with the number of USAID's secular partners These faith based organizations FBOs also represent the minority of US based development FBOs broadly Relying on extensive original survey and interview data the book suggests that many religious organizations are deterred from applying for public funding because they perceive the government as biased against them or fear their religious mission might be challenged In addition to investigating why some FBOs eschew government funds the book also examines why some FBOs choose to partner with USAID and what this relationship can look like Faith in Foreign Aid highlights the voices and experiences of FBOs showing a way for more effective engagement between religious organizations and government actors The book will be of interest to researchers across public policy development religion and political science as well as to practitioners at USAID and development organizations

National Missile Defence and the politics of US identity Natalie Bormann, 2013-07-19 Why adopt a poststructural lens for the reading of the military strategy of national missile defence NMD No doubt when contemplating an attack on US territory by intercontinental ballistic missiles consulting Michel Foucault and critical international relations theory scholars may not seem the obvious route to take The answer to this lies in another question why has there been so much interest and continuous investment in NMD deployment when there is such ambiguity surrounding the status of threat to which it responds controversy over its technological feasibility and concern about its cost Posed in this manner the question cannot be answered on its own terms the terms given in official accounts of NMD that justify the system's significance on the basis of strategic feasibility studies and conventional threat predictions guided by worst case scenarios Instead this book argues that the preferences leading to NMD deployment must be understood as satisfying requirements beyond strategic approaches and issues In turning towards the interpretative modes of inquiry provided by critical social theory and poststructuralism this book contests the conventional wisdom about NMD and suggests reading the strategy in terms of US identity Presented as an analysis of discourses on threats to national security around which the need for NMD deployment is predominantly framed this book is an effort to let the two fields of critical international relations theory and US foreign policy speak directly to each other It seeks to do so by showing how the concept of identity can be harnessed to an analysis of a contemporary military strategic practice

Who Controls the Internet? Jack Goldsmith, Tim Wu, 2006-03-17 Is the Internet erasing national borders Will the future of the Net be set by Internet engineers rogue programmers the United Nations or powerful countries Who's really in control of what's happening

on the Net In this provocative new book Jack Goldsmith and Tim Wu tell the fascinating story of the Internet's challenge to governmental rule in the 1990s and the ensuing battles with governments around the world It's a book about the fate of one idea that the Internet might liberate us forever from government borders and even our physical selves We learn of Google's struggles with the French government and Yahoo's capitulation to the Chinese regime of how the European Union sets privacy standards on the Net for the entire world and of eBay's struggles with fraud and how it slowly learned to trust the FBI In a decade of events the original vision is uprooted as governments time and time again assert their power to direct the future of the Internet The destiny of the Internet over the next decades argue Goldsmith and Wu will reflect the interests of powerful nations and the conflicts within and between them While acknowledging the many attractions of the earliest visions of the Internet the authors describe the new order and speaking to both its surprising virtues and unavoidable vices Far from destroying the Internet the experience of the last decade has led to a quiet rediscovery of some of the oldest functions and justifications for territorial government While territorial governments have unavoidable problems it has proven hard to replace what legitimacy governments have and harder yet to replace the system of rule of law that controls the unchecked evils of anarchy While the Net will change some of the ways that territorial states govern it will not diminish the oldest and most fundamental roles of government and challenges of governance Well written and filled with fascinating examples including colorful portraits of many key players in Internet history this is a work that is bound to stir heated debate in the cyberspace community
