Layer-Adapted Meshes for Reaction-Convection-Diffusion Problems Torsten Linß,2009-11-21 This is a book on numerical methods for singular perturbation problems in particular stationary reaction convection diffusion problems exhibiting layer behaviour More precisely it is devoted to the construction and analysis of layer adapted meshes underlying these numerical methods Numerical methods for singularly perturbed differential equations have been studied since the early 1970s and the research frontier has been constantly expanding since A comprehensive exposition of the state of the art in the analysis of numerical methods for singular perturbation problems is 141 which was published in 2008 As that monograph covers a big variety of numerical methods it only contains a rather short introduction to layer adapted meshes while the present book is exclusively dedicated to that subject An early important contribution towards the optimisation of numerical methods by means of special meshes was made by N S Bakhvalov 18 in 1969 His paper spawned a lively discussion in the literature with a number of further meshes being proposed and applied to various singular perturbation problems However in the mid 1980s this development stalled but was enlivened again by G I Shishkin s proposal of piecewise equidistant meshes in the early 1990s 121 150 Because of their very simple structure they are often much easier to analyse than other meshes although they give numerical approximations that are inferior to solutions on competing meshes Shishkin meshes for numerous problems and numerical methods have been studied since and they are still very much in vogue
