The three controllers achieve closed-loop H_2 norms of 0.04, 0.07 and 0.03, respectively. Computed closed-loop modes and compare the gains from road disturbance to y_1, y_2, y_3 for the passive and active systems. Abstract

So far you have designed H_{∞} controllers that meet the performance objectives for the nominal model discussed earlier. This model is only an approximation of the true structure and you need to make sure performance is maintained in the face of model errors and uncertainties. This is called robust performance. Next you will synthesize design μ controllers that achieve robust performance for the entire family of plant models synthesized with the design function using the structured singular value μ , i.e., μ or “structured” performance (μ vs H_{∞}).
