Hearing Voices and Other Matters of the Mind Robert N. McCauley, George Graham, 2020 Hearing Voices and Other Matters of the Mind examines the long recognized and striking similarities between features of mental disorders and features of religions Robert McCauley and George Graham emphasize underlying cognitive continuities between familiar features of religiosity of mental disorders and of everyday thinking and action They contend that much religious thought and behavior can be explained in terms of the cultural activation of humans natural cognitive systems which address matters that are essential to human survival hazard precautions agency detection language processing and theory of mind Those systems produce responses to cultural stimuli that may mimic features of cognition and conduct associated with mental disorders but are sometimes coded as religious depending on the context Their approach promises to shed light on both mental abnormalities and religiosity *The Matter of the Mind* John Teixeira, 2025-03-11 The Matter of the Mind focuses on the mind body problem Such a problem should be viewed not as a philosophical or metaphysical problem but as a cognitive one What needs to be accounted for is a representation of how the interaction of the mind and brain can become more intelligible The author proposes that science can provide such a representation especially the contemporary physics of string theory String theory offers a new conception of matter allowing a passage of matter to the mind without the difficulties imposed by a traditional common sense corpuscular conception of material objects In other words string theory will enable us to conceive of a continuum between matter and the mind There is no discontinuity between them once we abandon the visual perception based description of matter depicting it as solidity impenetrability and extension in space
