

SL Paper 3

This question is about polarization.

Distinguish between polarized light and unpolarized light.

This question is about the interference of sound waves.

Two loudspeakers, S1 and S2, each emit a musical note of frequency 2.5 kHz with identical signal amplitude. Point P lies on the line AB and is equidistant from S1 and S2. The speakers are placed 1.5 m apart from each other and 8.0 m from line AB. The speed of sound is 330 m s^{-1} .

A person walking in a straight line from A to B observes that the intensity of sound alternates between high and low.

- With reference to interference, explain why the intensity of sound alternates along line AB. [3]
- The sound has a maximum intensity at P. Calculate the distance along line AB to the next intensity maximum when S1 and S2 emit a musical note of frequency 2.5 kHz. [2]
- S1 and S2 are moved so that they are now 3.0 m apart. They remain at the same distance from line AB. Discuss the changes, if any, in the rate at which the intensity of sound alternates when a person is walking along line AB at half the speed. [2]

This question is about standing waves and organ pipes.
