The Hacked World Order Adam Segal, 2016-02-23 For more than three hundred years the world wrestled with conflicts that arose between nation states. Nation states wielded military force, financial pressure, and diplomatic persuasion to create world order. Even after the end of the Cold War, the elements comprising world order remained essentially unchanged. But 2012 marked a transformation in geopolitics, and the tactics of both the established powers and smaller entities looking to challenge the international community. That year, the US government revealed its involvement in Operation Olympic Games, a mission aimed at disrupting the Iranian nuclear program through cyberattacks. Russia and China conducted massive cyber espionage operations, and the world split over the governance of the Internet. Cyberspace became a battlefield. Cyber conflict is hard to track, often delivered by proxies, and has outcomes that are hard to gauge. It demands that the rules of engagement be completely reworked and all the old niceties of diplomacy be recast. Many of the critical resources of statecraft are now in the hands of the private sector, giant technology companies, in particular. In this new world order, cybersecurity expert Adam Segal reveals power has been well and truly hacked.

Traffic Mining Applied to Police Activities Fabio Leuzzi, Stefano Ferilli, 2018-03-21 This book presents high quality original contributions on the development of automatic traffic analysis systems that are able to not only anticipate traffic scenarios but also understand the behavior of road users: vehicles, bikes, trucks, etc. in order to provide better traffic management, prevent accidents, and potentially identify criminal behaviors. Topics also include traffic surveillance and vehicle accident analysis using formal concept analysis, convolutional and recurrent neural networks, unsupervised learning, and process mining. The content is based on papers presented at the 1st Italian Conference for the Traffic Police (TRAP) which was held in Rome in October 2017. This conference represents a targeted response to the challenges facing the police in connection with managing massive traffic data, finding patterns from historical datasets, and analyzing complex traffic phenomena in order to anticipate potential criminal behaviors. The book will appeal to researchers, practitioners, and decision makers interested in traffic monitoring and analysis, traffic modeling and simulation, mobility, and social data mining, as well as members of the police.
