

Ford Motor Company Customer-Specific Requirements

For Use With ISO/TS 16949

Per ISO/TS 16949, an "organization" is the manufacturing facility being registered to ISO/TS 16949. The sub-tier supplier is the manufacturing facility directly contracted by the organization to ship product to the organization in support of a Ford Motor Company contract.

A sub-tier supplier hired by the organization to perform services not directly related to a Ford Motor Company contract (e.g. floor cleaning or grass cutting) is not impacted in any way by the sub-tier supplier development or other sub-tier supplier requirements stated in ISO/TS 16949.

In this document, the terms "organization" and "supplier" are interchangeable, both representing the company (or site) being registered to ISO/TS 16949.

1. Scope

ISO/TS 16949 and this document define the fundamental quality system requirements for Ford Motor Company suppliers. This document contains the company-specific requirements supplemental to **Technical Specification, ISO/TS 16949**. These supplemental requirements shall be included in the scope of the registration/certification audit in order to be recognized as satisfying the Ford Motor Company supplier criteria for third-party certification by an IATF recognized and contracted certification body.

ISO/TS 16949 is applicable to manufacturing sites of suppliers to Ford Motor Company (production and service parts and materials), and to assemblers of production parts or materials supplying to Ford Vehicle Assembly Plants.

Tooling & Equipment suppliers to Ford Motor Company are not eligible to be registered to ISO/TS 16949. Registration to ISO 9001 is acceptable.
Semi-Conductor suppliers may register to ISO/TS 16949, providing they meet the scope requirements. . .

Service parts and materials applicability does not include aftermarket or remanufactured parts (See Definitions, "Organization").

All **ISO/TS 16949** requirements and the requirements of this document shall be addressed by the organization's quality system.

ISO/TS 16949 sanctioned interpretations are available on

The US English language version of this document shall be the official version for purposes of third party registration.

Plunkett, 2007-07 Contains trends statistical tables and an industry glossary This almanac presents over 300 profiles of outsourcing and offshoring industry firms It also includes addresses phone numbers and executives **Engine Combustion Instrumentation and Diagnostics** Hua Zhao, Nicos Ladommatos, 2001-01-30 This book provides a complete description of instrumentation and in cylinder measurement techniques for internal combustion engines Written primarily for researchers and engineers involved in advanced research and development of internal combustion engines the book provides an introduction to the instrumentation and experimental techniques with particular emphasis on diagnostic techniques for in cylinder measurements *The Horizontal Organization* Frank Ostroff, 1999-02-04 The vertical functional hierarchy has been the mainstay of business since the industrial revolution But it has its problems In fact the vertical design all but guarantees fragmented tasks overspecialization fiefdoms turf wars the urge to control from the top all the negatives that foster organizational paralysis In *The Horizontal Organization* Frank Ostroff provides executives with the first truly viable alternative to the age old vertical alignment Indeed he offers nothing less than the first full view of what the organization of the future looks like and how it works The concept of horizontal organization has been hailed in *Fortune* as a model corporation for the next fifty years and in a *Business Week* cover story as the real thing But until now management books have offered only piecemeal accounts of what the organization of the future might look like Ostroff a key developer of the concept of the horizontal organization offers the first workable road map He describes what the horizontal organization is what it looks like why it is important how it helps improve performance where it is appropriate and how to develop it The book contains real case examples that show how major international corporations and one federal agency have used Ostroff's concepts to meet their competitive goals For instance we see how Ford Motor Company's Customer Service Division turned to the horizontal organization to meet a highly ambitious goal to get the customer's car fixed right on time the first time at a competitive price in convenient locations We see how a horizontal design radically improved the performance of OSHA the federal agency that oversees occupational safety transforming it from a bureaucratic enforcer of regulations to a proactive problem solver in a concerted effort to improve working conditions and save lives And we see how Xerox combined both vertical and horizontal designs successfully a case that underscores when a firm can best use the horizontal organization to achieve their goals Ostroff also looks at a General Electric plant in North

Carolina Motorola's Space and Systems Technology Group and the home finance division of Barclays Bank highlighting how these major corporations have also used the horizontal organization to radically improve productivity. Many successful business books such as *Reengineering the Corporation* and *Beyond Reengineering* have given managers only a piece of the puzzle. Ostroff gives us the complete picture. *The Horizontal Organization* offers the first usable roadmap to the twenty-first century firm. It is a book everyone who desires to radically improve the performance of their organization will want to read.

This is the second book edited with a selection of papers from the two yearly THIESEL Conference on Thermo and Fluid Dynamic Processes in Diesel Engines organised by CMT Motores Térmicos of the Universidad Politécnica de Valencia Spain. This volume includes versions of papers selected from those presented at the THIESEL 2002 Conference held on 10th to 13 September 2002. We hope it will be the second volume of a long series reflecting the quality of the THIESEL Conference. This

year the papers are grouped in six main thematic areas: State of the Art and Prospective Injection Systems and Spray Formation; Combustion and Emissions; Engine Modelling; Alternative Combustion Concepts and Experimental Techniques. The actual conference covered a wider scope of topics including Air Management and Fuels for Diesel Engines and a couple of papers included reflect this variety. However, the selection of papers published here represents the most current preoccupations of Diesel engine designers, namely how to improve the combustion process using new injection strategies and alternative concepts such as the Homogeneous Charge Combustion Ignition.
