Twenge, 2017-08-22 We've all been desperate to learn what heavy use of social media does to adolescents Now thanks to Twenge's careful analysis we know It is making them lonely anxious and fragile especially our girls If you are a parent teacher or employer you must read this fascinating book Jonathan Haidt author of *The Anxious Generation* Born after 1995 they grew up with cell phones had an Instagram page before high school and cannot remember a time before the Internet They are iGen Now here is crucial reading to understand how these children teens and young adults are vastly different from their millennial predecessors and from any other generation With generational divides wider than ever parents educators and employers have an urgent need

to understand today's rising generation of teens and young adults Born in the mid 1990s up to the mid 2000s iGen is the first generation to spend their entire adolescence in the age of the smartphone With social media and texting replacing other activities iGen spends less time with their friends in person perhaps contributing to their unprecedented levels of anxiety depression and loneliness But technology is not the only thing that makes iGen distinct from every generation before them they are also different in how they spend their time how they behave and in their attitudes toward religion sexuality and politics They socialize in completely new ways reject once sacred social taboos and want different things from their lives and careers More than previous generations they are obsessed with safety focused on tolerance and have no patience for inequality As this new group of young people grows into adulthood we all need to understand them friends and family need to look out for them businesses must figure out how to recruit them and sell to them colleges and universities must know how to educate and guide them And members of iGen also need to understand themselves as they communicate with their elders and explain their views to their older peers Because where iGen goes so goes our nation and the world As seen in Time USA TODAY The Atlantic The Wall Street Journal and on CBS This Morning BBC PBS CNN and NPR

Arithmetic Counts! Paul Shoecraft, 2025-01-24 Dr Shoecraft may be the only mathematician since the New Math in the 1960s to seriously analyze the lowly subject of arithmetic and how to teach it His breakthrough came when he experimented with teaching what needs to be understood instead of known memorized like teaching why addition problems until the algorithm they are using supposedly becomes cemented in their brains By teaching the essence of arithmetic in sensible ways and appealing to children's love of games songs and movement he's proven that virtually ALL children can learn arithmetic the foundation of algebra higher mathematics science technology and more even music When children understand arithmetic they own it It's no longer just their teacher's math It's their math America's children are being held back in math because of how arithmetic is drug out in elementary school Virtually every textbook based elementary school math program in use today is mind numbing in its repetitiveness from grade to grade The reason for the

redundancy is to slow down the teaching of arithmetic so it can be memorized Research shows that the human brain is not designed to remember things learned by rote when no longer practiced That s acknowledged in the use it or lose it aphorism that states the obvious that we remember what we use and forget what we don t You know that to be true if you ve ever forgotten things you once knew as well as your own name things like an old address or a license plate number Every child can understand base ten numeration when taught hands on with arithmetic blocks Thereby every child can understand base ten arithmetic And every child can learn how to count out the number facts like 5 7 12 17 8 9 6 X 7 42 and 56 7 8 and if they forget one never have to guess and risk ridicule and bad grades if they guess wrong What matters in teaching arithmetic is not how much a child can remember but how much they can figure out if when they forget The Power of Middle School

Keen J. Babbage,2012-09-14 The middle school years are a maze of academic duties human growth and self development discovering self identity and increasing social interaction with other people This maze can be an adventure of achievement and opportunity or it can be a struggle of difficulty and disappointment As these experiences are the impetus or foundation for many later achievements in academics careers and personal life it is imperative that educators maximize these formative years by helping middle school students successfully travel through this maze despite its ups and downs its twists and turns and its new challenges to master and the old issues to resolve For instance educators must support students who have fallen behind so as to thwart their reduced likelihood of turnaround in high school Likewise educators must challenge exceptional students in order to perpetuate their enthusiasm for learning and prepare them for college studies By discussing the comprehensive roles and duties of school administrators counselors and teachers The Power of Middle School addresses how to maximize middle school curriculum and extra curricular activities for the academic personal and professional benefits of all students **Math for College and Career Readiness, Grade 7** Henderson,Mace,Fowler,Jones-Lewis,2016-01-04 Help students identify and apply the real world math skills they need for lifelong success Math for College and Career Readiness provides grade appropriate practice that offers early preparation for a variety of career paths For each career your students will strengthen fundamental math skills while gaining background information and becoming proficient problem solvers Mark Twain Media Publishing Company specializes in providing engaging supplemental books and decorative resources to complement middle and upper grade classrooms Designed by leading educators this product line covers a range of subjects including math science language arts social studies history government fine arts and character **Number Sense Routines** Jessica F. Shumway,2018 Upper elementary teachers have a big job to help students deepen their mathematical understanding and become more efficient mathematicians Number Sense Routines Developing Mathematical Understanding Every Day in Grades 3 5 is about tapping into every child s innate number sense and providing daily connected experiences that are responsive to children s learning needs Through familiar five ten or fifteen minute warm up routines author Jessica Shumway offers both beginner and veteran teachers easy and effective ways to build and solidify students number sense

foundations No matter how familiar the routine Jessica infuses each with new joy depth and life She reveals the careful thinking and planning that goes into each routine and provides detailed vignettes and dialogues of how they unfold in real classrooms She gives teachers a clear view into her nuanced facilitation Each routine becomes an exciting opportunity to understand where students are in their understanding and to help students articulate and extend their mathematical thinking Not only will these routines help develop students mathematical understanding as they move towards using standard algorithms but teachers will learn to better recognize the big ideas that emerge in discussions how to encourage important strategies based in number sense and how to facilitate discussions on key mathematical concepts **Texas Go Math!** ,2015 State adopted textbook 2015 Grade 7 *California Go Math* Hmh Hmh,2013-12-12
