

Introduction

1.1 Purpose

This document describes the various functions of our project. The actual design of the various modules and components of **Student Information System** is described in this document, which takes care of various functionalities that our project aims to achieve and for determining the operating characteristics of the system.

1.2 Product Scope

Student Information System (SIS) is a web-based application for students, faculty, academic staff and parents who want to get and retrieve student's whole information instantly via internet. The major benefit of this web portal is to store the students information at one place (like SERVER) and it can be accessed via online interaction. The SIS web portal is to replace the old and traditional file(paper work) storing process. Instead of tedious paper work, students will be able to submit required information electronically, and the departments will be able to evaluate the submissions with a much quicker turnaround.

1.3 Definitions, acronyms, and abbreviations

- **SIS:** Student Information System
- **SERVER:** Refers to the Host machine
- **CLIENT:** Refers to the user of SIS.
- **SQL:** Structured Query Language; used to retrieve information from a database.
- **SQL Server:** A server used to store data in an organized format.
- **BOOLEAN:** A true/false notation
- **UNIQUE KEY:** Used to differentiate entries in a database.
- **LAYER:** Represents a section of the project.
- **DATA STORAGE LAYER:** the section of the assignment referring to where all data is recorded.

Stowell, Daune West, James G. Howell, 2012-12-06 As we approach the end of the 20th century we can look back upon the achievements that have been made in a variety of human endeavours with pride Enormous strides have been made to improve the quality of life of millions of people through the application of the scientific discoveries made during this and past centuries The 20th century will be remembered as much for the mass exploitation of scientific discovery as for the discoveries themselves The technological age has meant that the human being is able to contemplate activities which defy nature For example some of the work involved in the preparation of these proceedings has been done whilst travelling at over 500 miles per hour seven miles above the surface of the earth It is not difficult to conjecture about the effect that this relatively recent technology has had upon a number of systems Air transportation has provided a number of benefits including such disparate examples such as enabling holidays famine relief and the cross fertilisation of cultural practices from other lands Equally there have been undesirable effects such as enabling the means of mass destruction interference in other cultures and the speedy transportation of disease Moreover the physical presence of the aeroplane itself represents the consumption of fossil fuels a source of pollution and a change in the way think about life The view expressed here is of course the view of an inhabitant of the western world
