We thank you for choosing an LAE controller. Before proceeding to the installation, please read this instructions sheet carefully: only in this way you will obtain maximum performance and safety.

1. INSTALLATION

1.1 The SSD90 must be secured to the panel by means of screws or rivets to be inserted into the appropriate slots. Protection is IP30, therefore please locate the unit in a position ensuring that no liquid infiltrates and damages the board.

1.2 Probes, power supply and outputs must be connected strictly according to the indications appearing on the board; the cables can pass through the hole on the unit side. For supply voltage and maximum switchable loads, please read the label on the enclosure. The flat cable of the remote unit must be connected making sure that the mechanical polarity is respected, finally secure the flat cable firmly by means of the suitable cable tie.

1.3 The SMD12RU remote unit is secured to the panel by means of the two springs at its base sides. The unit is mounted on the panel through a 29x71 mm opening, exert a moderate pressure so as to get the SMD12RU to adhere to the panel perfectly.

Differently, as to the SMD34RU model, remove the two side screws and open the enclosure. Mount the front of the remote unit through a 31x185 mm opening on the panel and then match it to the rear cover. Then finally close the box by means of the screws.

1.4 Probe T1 measures the air temperature and is used for the thermostat function. It must be located inside the room in a place that well reflects the temperature of the preserved product. Probe T2 measures the evaporator temperature and must be secured to it in the place where the maximum frost growth occurs.

1.5 The unit works with an ambient temperature between -10°...+50°C and 15%-80% of relative humidity. To reduce the effects of electromagnetic interferences, place the probe and signal cables as away as possible from power lines.

CAUTION: • If the relays switch a large load frequently, we suggest you contact us to obtain information about the relay contact life.

• Where delicate or valuable products have to be maintained under strict conditions, we suggest you use a second unit for limit and alarm purpose.
