Chapter 1 Notes – Quiz 1.2 Solubility in water

Answer Key

1/25

1. Seawater is a mixture of solutes and solvents. Seawater chloride is not important this solution.

2a) Define the term solute.
A substance that dissolves in a solvent

2b) Describe how sodium chloride dissolves in water.
Through dissolution of ions
Partially positive hydrogen of water molecules attracts the negative chloride ions
Partially negative oxygen and positive sodium ion attracts water molecules

3a) Solubility of sodium chloride can be shown.
Temperature impacts the solubility of sodium chloride.
As water heats up, the amount of sodium chloride that can be dissolved increases.
Conversely, as water cools, the amount of sodium chloride that can be dissolved decreases.

3b) The average salinity of seawater is 35 ppt. Describe how this body of water.

3c) Explain how evaporation would impact salinity.
Salinity will rise.
As seawater evaporates faster, water is lost faster than sodium and other salts are lost, resulting in an increase in salinity.

2. The diagram below illustrates changes in dissolved oxygen levels from surface to the bottom of the water.

3a) State the name of the area of extremely low oxygen.
Hypoxia

3b) Describe the trends in dissolved oxygen levels, as seen in the diagram.
As water depth increases, the dissolved oxygen level decreases. The oxygen level is highest at the surface and lowest at the bottom.

3c) Explain change in the levels of dissolved oxygen from 0 to 10 m on the diagram.
Dissolved oxygen levels are highest at the surface and lowest at the bottom. This is because oxygen is consumed by organisms and produced by photosynthesis. At the surface, there is more light, so photosynthesis is more active, leading to higher oxygen levels. At the bottom, there is less light, so photosynthesis is less active, and oxygen is consumed by organisms, leading to lower oxygen levels.

3d) Explain how evaporation would impact salinity.
Salinity will rise.
As seawater evaporates faster, water is lost faster than sodium and other salts are lost, resulting in an increase in salinity.

3e) Calculate the average ppt level for September 5.
Average ppt = $\frac{8.1 + 8.2 + 7.9 + 8.0 + 8.1}{5} = 8.0$

Citizen Science for Coastal and Marine Conservation John A. Cigliano, Heidi L. Ballard, 2017-10-31 In recent years, citizen science has emerged as a powerful new concept to enable the general public, students, and volunteers to become involved in scientific research. A prime example is in biodiversity conservation, where data collection and monitoring can be greatly enhanced through citizen participation. This is the first book to provide much-needed guidance and case studies from marine and coastal conservation. The novelty and rapid expansion of the field has created a demand for the discussion of key issues and the development of best practices. The book demonstrates the utility and feasibility, as well as limitations, of using marine and coastal citizen science for conservation and by providing critical considerations, i.e., which questions and systems are best suited for citizen science, presents

recommendations for best practices for successful marine and coastal citizen science projects A range of case studies for example on monitoring of seabird populations invasive species plastics pollution and the impacts of climate change from different parts of the world is included Also included are discussions on engaging youth indigenous communities and divers and snorkelers as citizen scientists as well as best practices on communication within citizen science building trust with stakeholders and informing marine policy as part of this exciting and empowering way of improving marine and coastal conservation

International Law for Small-Scale Fisheries

Julia N. Nakamura, 2025-03-27 This book provides an original and groundbreaking account of the applicability and key contributions of international law to small scale fisheries a fisheries subsector that has been historically overlooked by governments and international legal scholarship Small scale fisheries constitute most of the world's capture fisheries workforce they sustain the livelihoods of fishers and their communities while building and transmitting traditional knowledge and culture Significant attention has been given to small scale fisheries by the international community over the past decade building the momentum for dedicated research on such a topic Nevertheless the literature examining small scale fisheries from an international legal perspective remains scarce This book fills this gap by systemically examining different international legal regimes to unravel the normative foundations for securing the meaningful participation of small scale fisheries peoples in international fisheries management It connects the ecosystem approach a key principle of international fisheries law and the human rights regime to elucidate the benefits that participatory international fisheries management brings to enhance both the ecological and social aspects of fisheries sustainability It also examines the extent to which fisheries governance is democratic and provides an enabling framework for the integration of fishers knowledge into international fisheries management It is thereby oriented toward more justice and fair outcomes for small scale fisheries This book will be a valuable resource for academics and researchers with an interest in the governance of fisheries in international law the law of the sea environmental law and human rights law as well as to practitioners and policymakers working on the development and implementation of laws and policies governing fisheries and natural resources
