**Prentice Hall Guide to Finance Faculty** HASSELBACK,2001-06-27 Terminology And Technical Foundations Of Blockchains Dr. Sumegh Shrikant Tharewal,Dr. Shantanu Pandurang Kanade,Dr. Anuradha Shantanu Kanade,Dr. Sujeet More,2023-03-16 Blockchains are public and tamper proof digital records that are implemented in a distributed manner i e without a central repository Also blockchains often lack a central authority like a bank company or government In their simplest form they allow a group of users to record transactions in a shared ledger accessible only to members of that community Therefore once a transaction has been verified and added to the blockchain it cannot be modified in any way In 2008 the concept of blockchain was combined with other IT technologies and concepts to create modern cryptocurrencies These cryptocurrencies are a form of electronic money secured by cryptographic mechanisms rather than a central repository or authority Widespread public awareness of this technology began in 2009 with the creation

of the Bitcoin network the first of several modern cryptocurrencies The exchange of digital information representing electronic money receipts takes place in a decentralized manner in Bitcoin and other analog systems Bitcoin users can digitally sign and transfer their rights to this information to another user The Bitcoin blockchain publicly records this transmission allowing all members of the network to independently verify the authenticity of transactions A scattered group of people is responsible for the self sufficiency and management of the Bitcoin blockchain This along with cryptographic techniques makes the blockchain resistant to later attempts to alter the ledger for example transaction manipulation or block manipulation The creation of various cryptocurrency platforms such as Bitcoin and Ethereum<sup>1</sup> has been made possible thanks to the technology known as blockchain
