

## Physical Science

### Chapter 7 Notes

#### Section 1 - Magnetism

1. Magnets
  - **Magnetism** – the properties and interactions of magnets
  - **Magnetic force** – the force exerted by a magnet on another magnet
    - ⇒ This force can attract or repel depending on the orientation of the magnet(s)
    - ⇒ The strength of the force increases as the magnets get closer together
2. **Magnetic field** – the area around a magnet where the magnetic force is felt
  - The field is strongest close to the magnet and weakens with distance
  - The field forms curved lines called magnetic field lines
  - **Magnetic poles** – a region of space that surrounds a magnet and exerts a force on other magnets and objects made of magnetic materials
    - ⇒ All magnets have north and south poles
    - ⇒ Magnetic field lines start at the north pole and end at the south pole
  - Two magnets can either attract or repel each other
    - ⇒ When the magnets are aligned so that like poles are adjacent, the magnetic force will push the magnets apart
    - ⇒ When the magnets are aligned so the unlike poles are adjacent, the magnetic force will pull the magnets together

3. Magnetic Materials
  - Only a few metals such as iron, cobalt, or nickel are attracted to magnets or can be made into permanent magnets
  - **Magnetic domains** – groups of atoms within a metal with aligned magnetic poles
    - ⇒ Temporary magnet – occurs when the magnetic domains of the atoms in a metal are aligned. This alignment occurs when the object is placed near a permanent magnet. The alignment is lost due to the random motion of the atoms.
  - Permanent magnet – made by placing a piece of magnetic material, iron, cobalt, or nickel, in a strong magnetic field. The aligned magnetic domains add together and create a magnetic field inside the material that may be several thousand times larger than the field outside the material

#### Section 2 – Electricity and Magnetism

1. Electric Current and Magnetism
  - Passing electric current through a wire creates a magnetic field.
    - ⇒ The field forms a circular pattern around the wire
    - ⇒ The direction of the current of the field depends on the direction of the current
    - ⇒ The strength of the field depends on the amount of current flowing through the wire. No current, no magnetic field
