## Current Perspectives on Anti-Infective Agents K. Tamreihao, Saikat Mukherjee, Debananda S.

Ningthoujam, 2019-11-18 The volume is a comprehensive documentation on major infectious diseases from tropical countries which pose a serious threat to global healthcare programs. These include diseases such as tuberculosis, AIDS, leishmaniasis, kala-azar, elephantiasis, malaria, leprosy, various fungal disorders, and emergent viral diseases. Due to the widespread use of antibiotics, there is an emergence of drug-resistant pathogens in many regions. Hence, there is a need to search for novel, cost-effective bioactive compounds that demonstrate high efficacy and low toxicity in human cells from unexplored ecosystems to combat emerging drug-resistant pathogens. Chapters of this volume focus on the pathogenesis and etiology of each of the mentioned diseases, updated WHO reports, wherever applicable, conventional drugs and their pharmacokinetics, as well as new approaches to develop anti-infective agents. The authors also present a detailed report on superbugs, multi-drug resistant pathogens, and new measures being taken up to eradicate them. Information about new antimicrobials, bioactive peptides, and

silk protein sericin and the approaches taken by scientists and healthcare professionals for successful targeting of these molecules for human medicine This volume is essential for general readers healthcare professionals researchers and academicians actively involved in research on infectious diseases and anti infective therapeutic drugs Series Introduction Frontiers in Anti Infective Agents is a book series that focuses on current and new antibiotics and vaccines The series highlights the challenges faced by healthcare workers around the globe when facing epidemics caused by life threatening pathogens along with the measures being taken to combat these challenges The series is essential reading for all involved in infectious disease research including microbiologists medical professionals epidemiologists and life science researchers

**Cosmetic Microbiology** Daniel K. Brannan, 1997-04-23 Until now information on cosmetic microbiology was scattered and mostly consisted of oral tradition passed on from mentors to apprentices Finally here is an understandable and easy to read guide documenting cosmetic microbiology practices Cosmetic Microbiology A Practical Handbook contains technical information on sanitation and the preservation of cosmetics for microbiologists as well as for process engineers plant managers and workers The book provides the knowledge needed to create safe and usable cosmetic products All aspects of cosmetic microbiology are covered including testing methods preservation toxicology and regulatory concerns Infection Control for Advanced Practice Professionals Denise M. Korniewicz, Ph.D, RN, FAAN, 2013-10-01 Presents best practices for infection prevention and control in advanced practice Emphasizes team approach for infection control Case study provided for each chapter This professional reference combines research on the best practices for infection control in clinical settings with essential information for advanced practice nurses and physician assistants The book is organized by healthcare settings and the coverage ranges from small practice offices to large hospitals and medical institutions Each chapter is prefaced by a case study which is then incorporated into the theoretical material of the chapter as a continuing illustration This format provides a reader friendly instructional resource for advanced practice certifications and staff development From the Foreword At last is published a long needed text for advanced practice nurses APNs providing them with the information essential to the care of essentially every patient they will encounter Infection Control for Advanced Practice Professionals fills a void in the literature and recognizes the importance of a team approach to the prevention of infections in the variety of care settings in which APNs are practicing The book is particularly timely and relevant because it appropriately places infection prevention solidly within the larger patient safety movement and affirms that preventing infections is everybody's concern In acute care settings for example infection control has occasionally been relegated to the infection prevention specialist e.g. infection control nurse or hospital epidemiologist or the infection control committee This has shown to be ineffective in any setting It is those who touch the patients and oversee their care who must assume the responsibility for preventing untoward events such as infections While not all infections are preventable there is indeed room for improvement This comprehensive reference is a first and essential step in that direction Elaine Larson PhD RN FAAN CIC Anna C Maxwell
