### **Challenges and Solutions in Forecasting and Decision-Making in Marine Economy and Management** Xuemei

Li, Kevin Li, Junjie Wang, Song Ding, 2025-08-11 The marine economy and management pertain to the sustainable utilization of marine resources through internal and external coordination across departments with a focus on maximizing social and economic benefits. However, the persistence of activities such as overfishing, offshore oil spills, and excessive coastal development has led to escalating issues like offshore eutrophication, ocean acidification, warming, and marine plastic pollution, posing significant threats to marine sustainability. In alignment with the United Nations Sustainable Development Goal 14, substantial progress has been achieved by ocean management researchers in analyzing fishery resource management, optimization of marine industrial structures, development of marine energy, and adaptation of marine climate change. These studies hold crucial theoretical significance and practical value for understanding the state of the marine economy, guiding management practices, ensuring marine ecological security, and fostering sustainable ocean development.
