## Chapter 14 Glycolysis, Gluconeogenesis, and the Pentose Phosphate Pathway

---

### Multiple Choice Questions

1. Glycolysis

Page: 522 Difficulty: 2 Ans: D

Glycolysis is the name given to a metabolic pathway occurring in many different cell types. It consists of 11 enzymatic steps that convert glucose to lactic acid. Glycolysis is an example of:

- A) aerobic metabolism.
- B) anabolic metabolism.
- C) a net reductive process.
- D) fermentation.
- E) oxidative phosphorylation.

2. Glycolysis

Page: 523 Difficulty: 1 Ans: C

The anaerobic conversion of 1 mol of glucose to 2 mol of lactate by fermentation is accompanied by a net gain of:

- A) 1 mol of ATP.
- B) 1 mol of NADH.
- C) 2 mol of ATP.
- D) 2 mol of NADH.
- E) none of the above.

3. Fates of pyruvate under anaerobic conditions: fermentation

Page: 523 Difficulty: 1 Ans: E

During strenuous exercise, the NADH formed in the glyceraldehyde 3-phosphate dehydrogenase reaction in skeletal muscle must be reoxidized to  $\text{NAD}^+$  if glycolysis is to continue. The most important reaction involved in the reoxidation of NADH is:

- A) dihydroxyacetone phosphate  $\rightarrow$  glycerol 3-phosphate
- B) glucose 6-phosphate  $\rightarrow$  fructose 6-phosphate
- C) isocitrate  $\rightarrow$   $\alpha$ -ketoglutarate
- D) oxaloacetate  $\rightarrow$  malate
- E) pyruvate  $\rightarrow$  lactate

The Mycoplasmas V5 R Whitcomb, 2012-12-02 The Mycoplasmas Volume V Spiroplasmas Acholeplasmas and Mycoplasmas of Plants and Arthropods focuses on existing knowledge and recent development in research on spiroplasmas acholeplasmas and other mollicutes of plants and arthropods Organized into 11 chapters this volume discusses the nutrition cultivation ecology and molecular and cellular biology of spiroplasmas Because the occurrence of other mollicutes mycoplasma and acholeplasma in plant and arthropod environments is not extensively discussed in other volumes this volume shows the rapid progress in describing the new mollicutes from arthropods and plant surface that they contaminate Molecular studies of mollicute phylogeny and plant infections incited by the so called mycoplasma like organisms are also presented This book will provide a comprehensive reference source for all mycoplasmologists and a relevant and exhaustive summary of recent advances in the study of spiroplasmas acholeplasmas and mycoplasmas in plant and arthropod hosts for microbiologists cellular and molecular biologists plant pathologists and entomologists

Regulation of Cell Metabolism G. E. W. Wolstenholme, Cecilia M. O'Connor, 2009-09-16 The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia in which groups of leading scientists from a range of topics across biology chemistry and medicine assembled to present papers and discuss results The Novartis Foundation originally known as the Ciba Foundation is well known to scientists and clinicians around the world

**Organic geochemistry of natural waters** E.M. Thurman, 2012-12-06 This book is written as a reference on organic substances in natural waters and as a supplementary text for graduate students in water chemistry The chapters address five topics amount origin nature geochemistry and characterization of organic carbon Of these topics the main themes are the amount and nature of dissolved organic carbon in natural waters mainly fresh water although seawater is briefly discussed It is hoped that the reader is

familiar with organic chemistry but it is not necessary The first part of the book is a general overview of the amount and general nature of dissolved organic carbon Over the past 10 years there has been an exponential increase in knowledge on organic substances in water which is the result of money directed toward the research of organic compounds of new methods of analysis such as gas chromatography and mass spectrometry and most importantly the result of more people working in this field Because of this exponential increase in knowledge there is a need to pull together and summarize the data that has accumulated from many disciplines over the last decade

**Horizons of Bioenergetics** Anthony San Pietro,Howard Gest,2014-06-28 Horizons of Bioenergetics provides information pertinent to the fundamental aspects of bioenergetics This book covers a variety of topics including oxidative phosphorylation energy conservation ATP formation metabolic regulation glycolysis and photosynthesis efficiency Organized into five sessions encompassing 23 chapters this book begins with an overview of the major landmarks in biochemical evolution that are most relevant to the discussion on bioenergetics This text then reviews the knowledge about ATP generation by substrate level phosphorylation by anaerobic bacteria that ferment organic compounds Other chapters consider the resolution and reconstitution of oxidative phosphorylation This book discusses as well another energy requiring activity associated with electron transport in mitochondria that may take primacy over oxidative phosphorylation The final chapter deals with the possibility that conformational change can induce major shifts in electro chemical potential and provide a mechanism for energy storage and conversion This book is a valuable resource for biochemists scientists and research workers

Photoassimilate Distribution Plants and Crops Source-Sink Relationships Eli Zamski,Arthur A. Schaffer,2017-09-29 Adopting an interdisciplinary approach to the study of photoassimilate partitioning and source sink relationships this work details the major aspects of source sink physiology and metabolism the integration of individual components and photoassimilate partitioning and the whole plant source sink relationships in 16 agriculturally important crops The work examines in detail the components of carbon partitioning such as ecology photosynthesis loading transport and anatomy and discusses the impact of genetic environmental and agrotechnical factors on the parts of whole plant source link physiology

**Basic Exercise Physiology** Moran S. Sagiv,Michael S. Sagiv,2020-08-26 This book reviews the assessment of human performance and the role of different exercise modes both in a laboratory and clinical setting Details of how to successfully perform basic laboratory procedures for exercise training in health and disease as well as how to apply non invasive measurements in exercise physiology are provided Chapters cover how to appropriately use a range of measures in assessing pulmonary function anaerobic function and oxygen uptake Techniques for cardiopulmonary rehabilitation and the mechanisms associated with thermoregulation are also described Interactive exercises enable readers to easily assimilate key concepts and develop a thorough understanding of the topic Basic Exercise Physiology provides both trainees and professional healthcare staff interested in exercise physiology with a detailed and practically applicable resource on the topic

**Biomathematics** ,1997 Invertebrate Biology P. Calow,2012-12-06 Courses on the invertebrates have two principal aims 1 to introduce students to the diversity of animal life and 2 to make them aware that organisms are marvellously integrated systems with evolutionary pasts and ecological presents This text is concerned exclusively with the second aim and assumes that the reader will already know something about the diversity and classification of invertebrates Concepts of whole organism function metabolism and adaptation form the core of the subject matter and this is also considered in an ecological setting Hence the approach is multi disciplinary drawing from principles normally restricted to comparative morphology and physiology ecology and evolutionary biology Invertebrate courses as with all others in a science curriculum also have another aim to make students aware of the general methods of science And these I take to be associated with the so calledhypothetico deductive programme Here therefore I make a conscious effort to formulate simple some might say naive hypotheses and to confront them with quantitative data from the real world There are for example as many graphs in the book as illustrations of animals My aim though has not been to test out the principles of Darwinism but rather to sharpen our focus on physiological adaptations given the assumption that Darwinism is approximately correct Whether or not I succeed remains for the reader to decide *Energy Metabolism of Human Muscle* E. The Metabolic Challenges of Immune Cells in Health and Disease Claudio Mauro,Christian Frezza,2015-07-13 Obesity and its co morbidities including atherosclerosis insulin resistance and diabetes are a world wide epidemic Inflammatory

immune responses in metabolic tissues have emerged as a universal feature of these metabolic disorders. While initial work highlighted the contribution of macrophages to tissue inflammation and insulin resistance, recent studies demonstrate that cells of the adaptive immune compartment including T and B lymphocytes and dendritic cells also participate in obesity-induced pathogenesis of these conditions. However, the molecular and cellular pathways by which the innate and adaptive branches of immunity control tissue and systemic metabolism remain poorly understood. To engage in growth and activation, cells need to increase their biomass and replicate their genome. This process presents a substantial bioenergetic challenge: growing and activated cells must increase ATP production and acquire or synthesize raw materials including lipids, proteins, and nucleic acids. To do so, they actively reprogram their intracellular metabolism from catabolic mitochondrial oxidative phosphorylation to glycolysis and other anabolic pathways. This metabolic reprogramming is under the control of specific signal transduction pathways whose underlying molecular mechanisms and relevance to physiology and disease are subject of considerable current interest and under intense study. Recent reports have elucidated the physiological role of metabolic reprogramming in macrophage and T cell activation and differentiation, B and dendritic cell biology, as well as in the crosstalk of immune cells with endothelial and stem cells. It is also becoming increasingly evident that alterations of metabolic pathways play a major role in the pathogenesis of chronic inflammatory disorders. Due to the scientific distance between immunologists and experts in metabolism (e.g., clinicians and biochemists), however, there has been limited cross talk between these communities. This collection of articles aims at promoting such cross talk and accelerating discoveries in the emerging field of immunometabolism.

## Unveiling the Energy of Verbal Beauty: An Psychological Sojourn through **Glycolysis Short Answer Questions Lehninger**

In a global inundated with screens and the cacophony of instant conversation, the profound energy and emotional resonance of verbal artistry frequently fade in to obscurity, eclipsed by the regular onslaught of noise and distractions. However, situated within the lyrical pages of **Glycolysis Short Answer Questions Lehninger**, a fascinating perform of literary elegance that pulses with organic feelings, lies an memorable trip waiting to be embarked upon. Penned by way of a virtuoso wordsmith, this mesmerizing opus manuals visitors on an emotional odyssey, lightly revealing the latent possible and profound affect stuck within the elaborate web of language. Within the heart-wrenching expanse with this evocative analysis, we shall embark upon an introspective exploration of the book is central themes, dissect their fascinating writing style, and immerse ourselves in the indelible effect it leaves upon the depths of readers souls.
