**High-Performance Automotive Cooling Systems** John F. Kershaw, 2019-06-15 When considering how well modern cars perform in many areas it is easy to forget some of the issues motorists had on a regular basis 40 years ago Cars needed maintenance regularly plugs and points had to be replaced on a frequent basis the expected engine life was 100 000 miles rather than double and triple the expectation that you see today and an everyday hassle especially in warm climates was being the victim of an overheating car It was not uncommon on a hot day to see cars stuck in traffic spewing coolant onto the ground with the hoods up in a desperate attempt to cool off Fast forward to today and it s easy to forget that modern cars even have coolant The temp needle moves to where it is supposed to be and never moves again until you shut the car off For drivers of vintage cars this level of reliability is also attainable In **High Performance Automotive Cooling Systems** author Dr John Kershaw explains the basics of a cooling system operation provides an examination of coolant and radiator options explains how to manage coolant speed through your engine and why it is important examines how to manage airflow through your radiator takes a thorough look at cooling fans and finally uses all this information in the testing and installation of all these components Muscle cars and hot rod engines today are pushed to the limit with stroker kits and power adders straining the capabilities of your cooling system to extremes never seen before Whether you are a fan of modern performance cars or a fan of more modern performance in vintage cars this book will help you build a robust cooling system to match today s horsepower demands and help you keep your cool

**Engine Cooling Systems HP1425** Ray T. Bohacz, 2007-11-06 The ultimate guide to engine cooling systems for peak performance Covers basic theory and modifications individual components such as water pump radiator and thermostatic control systems and information on designing a cooling system

Korczak,2010 Overheating issues on the University of Illinois0 9s Formula SAE cars prompted a study evaluating the cooling module performance The challenge faced by many Formula SAE teams internationally is a large limit on their budget and resources as well as their short development cycle The developed experimental method needed to be straight forward and to use the limited equipment available and supplied by the university A simple and cost effective method for analyzing the heat carrying capacity of the cooling module on the Formula SAE vehicles was developed Simple fixtures were designed and built in order to equip the Formula SAE car with sensors able to acquire the necessary data in order to calculate the heat carrying capacities of the air flowing through the heat exchanger and the water flowing through the engine Physical testing was successfully carried out under driving conditions whenever possible to attain the most applicable results The University of Illinois0 9s 2009 Formula SAE car was tested to determine the

effectiveness of its cooling system and to identify problem areas It was found that design changes made from 2008 to 2009 did provide a significant increase in the capacity of the cooling module to adequately cool the Honda F4i engine on the Formula SAE car In addition the cooling capacity of the system was quantified for the first time for the Formula SAE team Results from this research laid groundwork for future improvements on the Formula SAE car to be quickly and cheaply evaluated and compared with previous baselines using the tools available from the university and avoiding guess work
