Knowledge, Curriculum and Equity Brian Barrett, Ursula Hoadley, John Morgan, 2017-07-20 In 2008 the first in a series of symposia established a social realist case for knowledge as an alternative to the relativist tendencies of the constructivist post structuralist and postmodernist approaches dominant in the sociology of education The second symposium focused on curriculum and the development of a theoretical language grounded in social realism to talk about issues of knowledge and curriculum Finally the third symposium brought together researchers in a broad range of contexts to build on these ideas and arguments and with a concerted empirical focus bring these social realist ideas and arguments into conversation with data Knowledge Curriculum and Equity Social Realist Perspectives contains the work of the third symposium where the strengths and gaps in the social realist approach are identified and where there is critical recognition of the need to incrementally extend the theories through empirical study Fundamentally the problem that social realism is seeking to address is about understanding the social conditions of knowledge production and exchange as well as its structuring in the curriculum and in pedagogy The central concern is with the on going social reproduction of inequality through schooling and exploring whether and how foregrounding specialised knowledge and its access holds the possibility for interrupting it This book consists of 13 chapters by different authors working in Oceania Asia Europe Africa and North America From very different vantage points the authors focus their theoretical and empirical sights on the assumptions about knowledge that underpin educational processes and the pursuit of more equitable schooling for all

14 **The Dyscalculia Solution** Jane Emerson, Patricia Babbie, 2014-12-08 This new book by authors Jane Emerson and Patricia Babbie follows on from their award winning book the Dyscalculia Assessment Once careful assessment has identified the particular numeracy difficulties your pupils may have the Dyscalculia Solution provides a practical teaching guide for addressing and solving those difficulties The Dyscalculia Solution includes step by step instructions on how to teach pupils to use whole numbers by talking and reasoning about them and communicating their thinking in a verbal diagrammatic and written form The book includes scripts to emphasise the importance of using the correct language to develop numerical thinking as well as teaching objectives activities and games which are important for fostering a positive attitude to numeracy Each new concept builds on previous understanding so that new facts are derived by reasoning from known facts The Dyscalculia Solution is ideal for use with primary school children but can easily be adapted for older students and is

invaluable for SENCOs TAs educational psychologists and mainstream teachers keen to support students with numeracy difficulties in their class Accompanying materials in both print and electronic formats to support busy teachers by providing lesson plans and worksheets are available with this book

Associative Learning For A Robot Intelligence John H Andrae,1998-09-22 The explanation of brain functioning in terms of the association of ideas has been popular since the 17th century Recently however the process of association has been dismissed as computationally inadequate by prominent cognitive scientists In this book a sharper definition of the term association is used to revive the process by showing that associative learning can indeed be computationally powerful Within an appropriate organization associative learning can be embodied in a robot to realize a human like intelligence which sets its own goals exhibits unique unformalizable behaviour and has no hidden homunculi Some believe that artificial intelligence is undergoing a paradigm shift There are undoubtedly several competing ideas and ideals Neural networks and dynamic systems are offered as alternatives to the information processing and digital computer models of the brain One is asked to decide between symbolic and subsymbolic between algorithmic and nonalgorithmic and between information processing and interactive systems Even in the short distance travelled in this book associative learning is seen to embrace both sides of these dichotomies
